

Network Camera

VB-M641VE/VB-M640VE Installation Guide

Please be sure to read the "Safety Precautions" section for correct use. After reading this Installation Guide, keep it in a readily accessible location for future reference.

* Some cameras are not available in certain countries or regions.

Caution Request a professional installer for all installation work. Never try to install the camera yourself. Doing so may result in unforeseen accidents such as dropping the camera or electric shock.

Installation Guide (This document)

Dedicated wrench

Accessories

The following accessories can be purchased separately as necessary. Some accessories are not available in certain countries or regions

Pendant Mounting Kit PC640-VB

Dedicated accessory used to install the camera to the end of pipe that extends from high ceilings, such as in big-box

Dome Unit DU640-S-VB

Smoked dome cover.

Sunshade Cover SC640-VB

Dedicated accessory to protect the camera body from direct sunlight.

Heater Unit HU641-VB M641VB

Dedicated accessory attached to the interior of VB-M641VE to maintain operation temperature within the dome and achieve stable operation even in extremely cold environments.

Conduit Adapter CA640-VB

Dedicated accessory used to protect the wiring cable to connect the pipe and the body.

Canon AC Adapter PA-V18 M641VE

Dedicated AC adapter for this camera.

Symbols Indicating Safety Precautions

This Installation Guide uses the following symbols to indicate important information the user should know in order to use the product safely. Explanations are provided for each symbol so that users will understand the level of importance for each. Be sure to observe these items.

♠ Warning	Failure to follow the instructions accompanied by this symbol may result in death or serious injury.
♠ Caution	Failure to follow the instructions accompanied by this symbol may result in injury.
Caution	Failure to follow the instructions accompanied by this symbol may result in property damage.
Important	This symbol indicates important or restricted items.
S Note	Contains reference information for operation or additional explanations.

Safety Precautions

Installation Precautions

Do not install in the following places:

- Places in strong direct sunlight, near heat-generating objects, or locations subject to high
- Places near fire sources or flammable solvents (alcohol, thinner, fuel, etc.)
- Places subject to oily smoke or steam
- Confined or enclosed places
- Failure to do so may result in fire or electric shock.
- M641VE Insulate the ends of cables you are not using. Failure to insulate will cause fire or electric shock.

Notes on Power Supply

- M641VE Only use the dedicated AC adapter (sold separately) for AC power.
- Do not set any heavy objects on the power cable (or the LAN cable for a PoE power supply). • Do not pull, forcibly bend, scratch, or modify the power cable (or the LAN cable for a PoE power
- M641VE Do not cover or wrap the AC adapter (sold separately) with cloth or blankets.
- Failure to do so may result in fire or electric shock.

! Caution

- For installation or inspection of this camera, consult the dealer where you purchased the product.
- This installation should be made by a qualified service person and should conform to all local codes. • When installing, make sure the surface is capable of withstanding the total weight of the camera and accessories, and sufficiently reinforce if necessary.
- Be sure to use installation screws designed for the type of surface the camera is to be installed.
- Periodically check the parts and screws for rust and loosening, in order to prevent injuries and equipment damage due to falling items.
- Do not install in unstable places, places subject to significant vibration or impact, or places subject to salt damage or corrosive gas.
- Do not install in places subject to strong winds.
- Do not install where snow can accumulate directly on the camera.
- Be sure to attach the safety wire when installing the camera. Failure to do so may result in the camera falling or other accidents.
- Do not touch the edges of metal parts with bare hands.
- Be careful not to get your fingers caught when installing.
- Failure to do so may result in injuries.

The contents of this guide are subject to change without any prior notice.

Caution

- Do not move the lens unit by hand.
- Do not install on an unstable surface.
- To maximize shock resistant specifications, do not install on insufficiently strong surfaces or surfaces
- subject to significant vibration.
- After turning off the power, do not turn the power on again for at least five seconds.
- Take measures to remove static electricity before performing any procedures.
- If there is condensation, please wait to power on, until the condensation dissipates.
- Please waterproof and dust-proof camera, when installing outdoors. Failure to do so may result in malfunctions.
- Take care not to damage wiring or piping. Failure to do so may result in damage to peripheral items.

Important

• We recommend the installation of a lightning arrester (a surge protection device) as a measure against failures caused by lightning strikes. Please refer to our website for details.

Precautions for Installing the Camera Outdoor

When installing the camera outdoors, observe the following precautions to retain waterproof/dustproof capabilities.

- Use the sunshade cover (sold separately) when installing in a location with direct sunlight.
- Completely wrap the cable connections and the ends of cables you are not using, including the connectors, with waterproof tape up to the cable jacket, so as not to allow water to enter. Please refer to the waterproofing explanation sheet for details on how to wrap the waterproofing tape.
- When mounting the camera onto a wall or other upright surface, make sure that the cables and composite pipe are facing down to prevent rain infiltration.
- If wiring by connecting the camera to the composite pipe (3/4 inch NPSM threaded hole), bridge the gap using the conduit adapter (sold separately). When connecting the conduit adapter and the pipe, wrap Teflon tape around the tip of the pipe to prevent water getting in as necessary, clear any debris, and firmly tighten. If necessary, apply silicon sealant to seal it tightly after attaching the pipe.
- Firmly fix the dome case to the main unit of the camera with the lock screws, taking care not to pinch cables between the main unit and dome case.

Precautions for Use

/ Warning

- If you discover defective conditions such as smoke, strange sounds, heat or strange odors, immediately stop using the camera and contact your nearest dealer. Fire or electric shock may result from continued use of the product.
- If thunder starts, stop installation or inspection etc. and do not touch the camera or continue connecting the cable.
- Do not disassemble or modify the camera.
- Do not damage the connecting cable.
- Do not insert foreign objects such as water or metal into the camera.
- Do not use flammable sprays near the camera.

Failure to do so may result in fire or electric shock.

- Do not leave LAN cables, external power supply, or the power connector for the AC adapter (sold
- separately) connected when the camera is not in use for long periods.
- Do not use flammable solvents such as alcohol, paint thinner or benzine when cleaning the camera.

Please refer to the installation procedures or the Appendix – Specifications for specifications not listed below.

Camera

2.4x optical zoom (4x digital zoom) lens (electric drive) Viewing Angle For 16:9 aspect ratios Horizontal: 111.5° (W) - 46.2° (T) Vertical: 60.5° (W) - 25.9° (T) For 4:3 aspect ratios

Before Installing the Camera

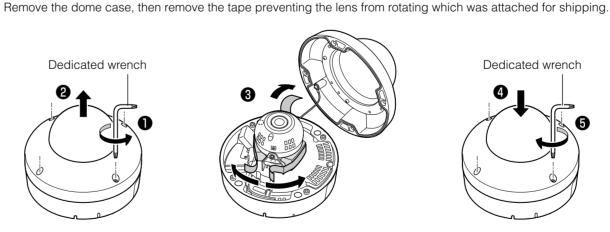

Set the IP address and other network information on the camera using the "Camera Management Tool" on the

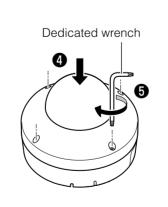

Removing the dome case and the lens rotation prevention tape

For details on how to operate the "Camera Management Tool", please refer to the "Camera Management Tool

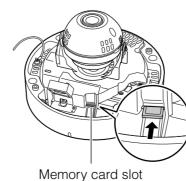

User Manual".

Using a Memory Card

Remove the dome case and place the memory card in the memory card slot. To remove the memory card, push it in all the way until the card slightly pops out and remove.

Important

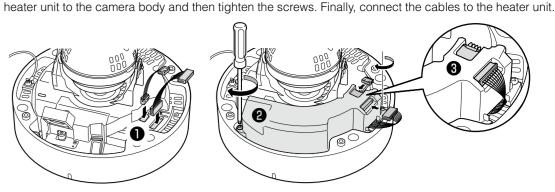

• Insert a memory card before installing the camera.

• When using a memory card with the camera for the first time, it is recommended to format the card after inserting it into the camera (please refer to the "Operation Guide").

 Always unmount the memory card before removing it (please refer to the "Operation Guide").

Using the Heater Unit (sold separately) M641VB

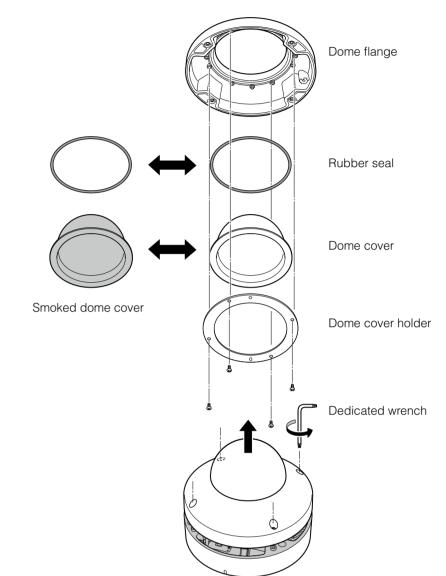

Connect the two heater cables included with the heater unit, to the terminals on the camera side. Next, attach the

Using the Dome Unit (sold separately)

Remove the dome case from the camera, then remove the dome cover holder and dome flange, and replace with the smoked dome.

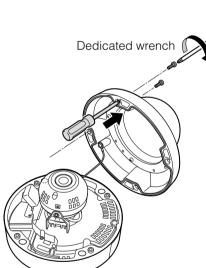

• Take care when replacing so as not to scratch the dome cover. • For proper protection against water and dust, please make sure the screws are firmly tightened during installation.

Using the Sunshade Cover (sold separately)

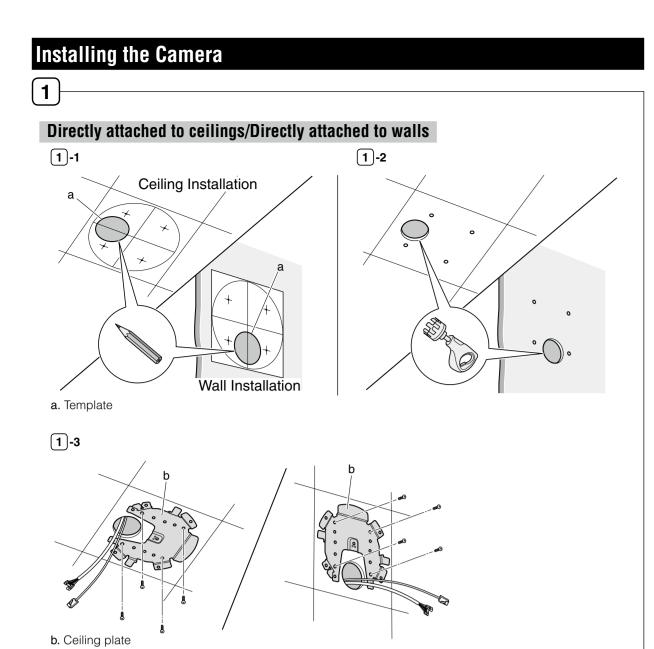

pressing and loosening from the inside of the case.

The sunshade cover is attached to the camera body together with the dome case. In order to install it, of the four lock screws for the dome case, remove the two located at the top of the dome case beforehand. The dome case lock screws can be removed by

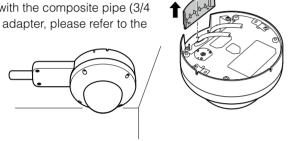

Important

If the cables cannot be stored above a ceiling

Remove the interface cover and pass the cable through. You can also use the conduit adapter (sold separately) to connect with the composite pipe (3/4 inch NPSM threaded hole). If you use the conduit adapter, please refer to the Installation Guide included with the adapter.

Interface cover

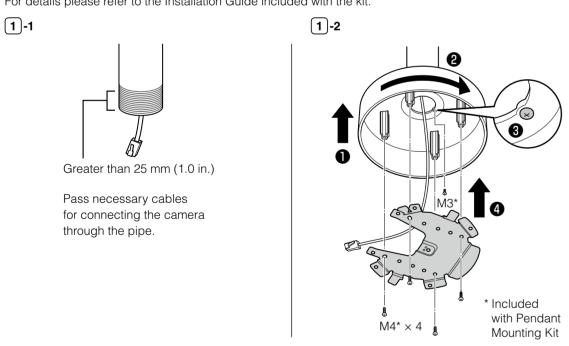

Attaching to a junction box

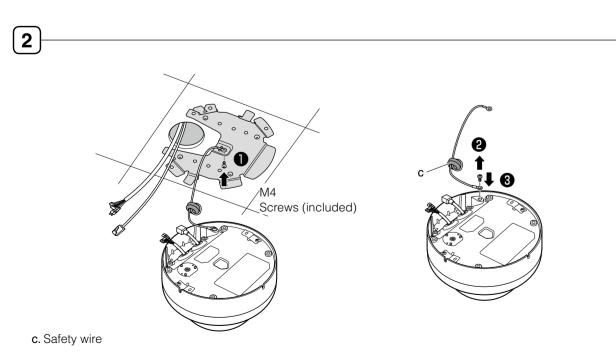

Attach the ceiling plate to the junction box after confirming the fixing holes locations with the external dimensions diagram.

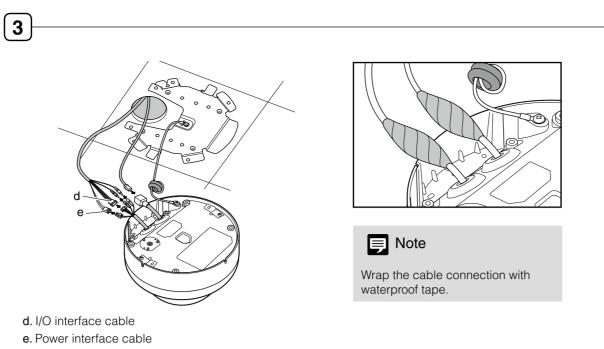

Ceiling pendant mounting

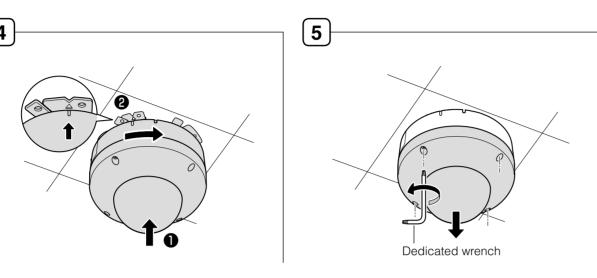

Mount using the Pendant Mounting Kit (sold separately).

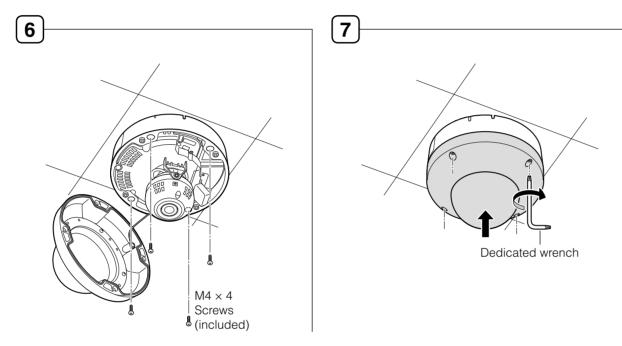

For details please refer to the Installation Guide included with the kit.

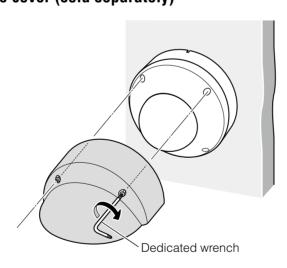

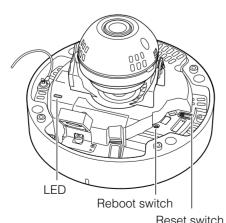

Attaching the sunshade cover (sold separately)

When the installation has finished, please adjust the angle. For more information, please refer to the

ebooting/Resetting the Camera

To reboot the camera by turning its power off and on, remove the dome case and press the reboot switch.

Rebooting can be done from the camera settings page as well (please refer to the "Operation Guide").

Resetting

To reset the camera to its factory default settings, press the reset switch and reboot switch while checking the LED display in the following order.

Reset switch 1) Hold the reset switch down, and press the reboot switch with a pointed object.

- 2) After holding down the reset switch for at least three seconds,
- release the reboot switch. 3) After the LED starts to blink, release the reset switch. When the
- blinking has stopped, the unit has finished resetting.

Connecting the Camera

To prevent cable connections from shorting out, wrap each individual connection with insulating tape, and then wrap all of the cables with waterproofing tape.

Power Connection

Power can be supplied to the camera in the three ways described below. Please be sure to read the user manual for the dedicated power supply before use

- Power supply should conform to all local codes.
- The power supply should also comply with IEC/UL60950-1 (SELV/LPS) standards.
- M641VE Please only use 24 V AC as a power source when using the Heater Unit HU641-VB (sold separately). PoE, 12 V DC and AC Adapters cannot be used.

■ PoE (Power over Ethernet)

The camera supports PoE functions. Power can be supplied to the camera by using a LAN cable connected to a PoE HUB that conforms to the IEEE802.3at Type1 standard.

Important

- Check with your dealer for more information about PoE HUB and Midspan technology.
- Midspan (a LAN cable power supply device) is a device that, like a PoE HUB, supplies power to the camera via a LAN
- Some PoE HUBs allow the limitation of power for each port, but applying limits may interfere with performance. If using this type of PoE HUB, do not limit the operating power.
- Some PoE HUBs have limits for the total power consumption for the ports, which can interfere with performance when
- multiple ports are in use. For more information, check the instruction guide for your PoE HUB. • M641VE When the camera is connected to both a PoE HUB and an external power supply (12 V DC or 24 V AC), power from the power supply first connected is given priority. But when both power supplies are connected, according to the
- combination, problems such as failure of the network connection may occur. If a problem arises, disable one of the power

■ External Power Supply M641VE

12 V DC or 24 V AC input can be used. Use the included interface cable to connect to the camera power connection terminal.

1		1: BROWN	Power 24 V AC / 12 V DC non-polar
'	<u>'</u> 🖫	2: BLUE	Power 24 V AC / 12 V DC non-polar
3		3: GREEN	FG (frame ground)

12 V DC can be connected in a non-polar configuration.

1mportant

- The power supply should be within the following voltage range.
- 24 V AC: Voltage fluctuation within ±10% of 24 V AC (50 Hz or
- 60 Hz ±0.5 Hz or less) Current supply capacity of at least 1.0 A per camera
- 12 V DC: Voltage fluctuation within ±10% of 12 V DC Current supply capacity of at least 1.5 A per camera
- When using a 12 V DC battery power supply, be sure to connect resistors of at least 0.5 1.0 $\Omega/20$ W in series to the
- For an external power supply, use a double-insulated device.

Recommended Power Cables [Reference]

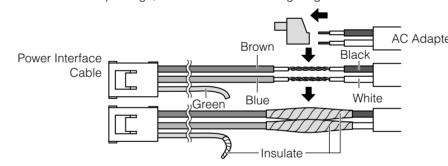

Cable (AWG)	24	22	20	18	16	
12 V DC maximum cable length	m (ft.)	5 (16.4)	9 (29.5)	14 (45.9)	23 (75.5)	32 (105.0)
24 V AC maximum cable length	(- /	11	18	29	46	64
· ·	(ft.)	(36.1)	(59.1)	(95.1)	(150.9)	(210.0)

Use UL cable (UL-1015 or equivalent) for 12 V DC or 24 V AC wiring.

■ AC Adapter M641VE

Please use the dedicated AC adapter (sold separately).

Remove the power connector with the attached AC adapter, then connect the power interface cable from the power connector included in the package, as shown in the following diagram

External Device I/O Terminals M641VE

External device I/O terminals consist of two input and output systems each. Viewer can be used to check external device input status and control output to an external device (please refer to the "Operation Guide"). Use the included I/O interface cable to connect to external device input/output terminals.

■ External Device Input Terminals (IN1, IN2)

External device input terminals consist of two sets (IN1, IN2) of two terminals, with the negative terminals connected to the camera interior GND. Connecting cables to the positive and negative terminals and opening or closing the circuit notifies the Viewer.

Important

• When connecting sensors and switches, connect terminals that are electrically isolated from the respective power and

■ External Device Output Terminals (OUT1, OUT2)

External device output terminals consist of two sets (OUT1, OUT2) of two terminals. The sets have no polarity. Controls from the Viewer can be used to open and close the circuit between the terminals. Using optical couplers. the output terminals are isolated from the camera's internal circuit.

The load connected to the output terminals should be within the following rating range. Rating between output terminals:

- Internal Connection Diagram
- Maximum voltage 50 V DC Continuous load current at or below 100 mA

Audio Input/Output Terminals M641VE

On resistance: Max. 30 Ω

Each audio input/output terminal has one input system and one output system. Connecting the camera to an audio input/output device such as a microphone or a speaker with an amplifier allows you to send/receive audio through the Viewer.

Use the \$3.5 mm (\$0.14 in.) monaural mini-jack connector to connect an audio input/output device.

■ Audio Input Terminal Common LINE IN/MIC IN (monaural input)

Although the camera only has a single audio input system, it supports two types of microphone input: LINE IN and MIC IN. Before using the audio input, please confirm the [Audio Input] on the Setting Page (please refer to the "Operation Guide"). LINE IN is selected by default.

- Input terminal: \$43.5 mm (\$0.14 in.) mini jack (monaural)
- Dynamic MIC IN
- Input impedance: 1.5 k Ω ±5% * Supported microphones: Output impedance: $400 - 600 \Omega$
- Condenser MIC IN
- Input impedance (microphone bias resistance): 2.2 kΩ ±5%
- Microphone power supply: plug-in power (voltage: 2.3 V)
- * Supported microphones: Condenser microphones with plug-in power support
- Input level: Max. 1 Vp-p * Use a microphone with an amplifier

■ Audio Output Terminal LINE OUT (monaural output)

Connect the camera to a speaker with an amplifier. Audio can be sent to the speaker from Viewer.

- Output terminal: \$43.5 mm (\$0.14 in.) mini jack (monaural)
- Output level: Max. 1 Vp-p
- * Use a speaker with an amplifier.

Only for European Union and EEA (Norway, Iceland and Liechtenstein)

the WEEE Directive (2012/19/EU), the Battery Directive (2006/66/EC) and/or national legislation implementing those Directives. These symbols indicate that this product is not to be disposed of with your household waste, according to If a chemical symbol is printed beneath the symbol shown above, in accordance with the

Battery Directive, this indicates that a heavy metal (Hg = Mercury, Cd = Cadmium, Pb = Lead) is present in this battery or accumulator at a concentration above an applicable threshold specified in the Battery Directive.

This product should be handed over to a designated collection point, e.g., on an authorized one-for-one basis when you buy a new similar product or to an authorized collection site for recycling waste electrical and electronic equipment (EEE) and batteries and accumulators. Improper handling of this type of waste could have a possible impact on the environment and human health due to potentially hazardous substances that are generally associated with EEE. Your cooperation in the correct disposal of this product will contribute to the

effective usage of natural resources. For more information about the recycling of this product, please contact your local city office, waste authority, approved scheme or your household waste disposal service or visit www.canon-europe.com/weee, or www. canon-europe.com/battery.
