

Wireless File Transmitter

WFT-E7 (Ver.2)

for EOS 5D Mark IV

This manual is for the WFT-E7 (Ver.2) installed with firmware version 1.3.0 or later.

INSTRUCTION MANUAL

Introduction

What You Can Do with the Transmitter

The transmitter is an accessory for EOS cameras that enables LAN functions to be used when attached to the camera.

Using the transmitter's LAN functions enables you to do the following:

FTP Transfer

Transfer images to an FTP server

EOS Utility

Use EOS Utility to shoot, view, and download images remotely

WFT Server

Use a web browser to shoot, view, and download images remotely

Linked Shooting

Sync the Camera Time

- Wirelessly trigger shooting by receiver cameras linked to a sender camera
- Synchronize time between the same camera models

Conventions Used in this Manual

- To comply with local radio wave regulations, Canon offers five region-specific versions of the transmitter (A, B, C, D, and E) in various areas around the world (see separate sheet). For convenience, the product in this manual is referred to as “WFT-E7 (Ver.2)”, without reference to the versions A, B, C, D, or E.
- In this manual, the term “access point” indicates wireless LAN access points, wireless LAN routers, etc. that relay a LAN connection.
- These instructions should be followed only after setting up your LAN and FTP server environments. For information about setting up the environments, refer to the documentation provided with each device or contact the manufacturer.
- Read the Camera Instruction Manual and familiarize yourself with operating the camera before following the instructions on camera options.

Icons in this Manual

<  > : Indicates the Main Dial.

<  > : Indicates the Quick Control Dial.

<  > : Indicates the Multi-controller.

<  > : Indicates the Setting button.

* In addition to the above, the icons and symbols used on the camera's buttons and displayed on the LCD monitor are also used in this manual when discussing relevant operations and functionality.

(p.**): Reference page numbers for more information.

 : Warnings to prevent potential problems during operation.

 : Supplemental information.

Basic Assumptions

- All operations explained in this manual assume that the power switch is set to <ON>.
- It is assumed that all the menu settings, Custom Functions, etc. are set to their defaults.

- Image transfer, remote shooting, or image viewing requires adequate knowledge of configuring your LAN and FTP server. Canon cannot provide support for configuring LANs or FTP servers.
- Note that Canon cannot be held liable for any loss or damage to the transmitter from erroneous network or FTP server settings. In addition, Canon cannot be held liable for any other loss or damage caused by use of the transmitter.
- When using LAN functions, establish appropriate security at your own risk and discretion. Canon cannot be held liable for any loss or damage caused by unauthorized access or other security breaches.

Safety Precautions

The following precautions are provided to prevent harm or injury to yourself and others. Make sure to thoroughly understand and follow these precautions before using the product.

Warnings: Follow the warnings below. Otherwise, death or serious injuries may result.

- To prevent fire, excessive heat, chemical leakage, explosions, and electrical shock, follow the safeguards below.
 - Do not insert any foreign metallic objects into the electrical contacts of the equipment, accessories, or connecting cables.
- Do not use the equipment where there is flammable gas. There is a risk of explosion or fire.
- If you drop the equipment and the casing breaks open to expose the internal parts, do not touch the exposed parts. There is a possibility of electrical shock.
- Do not disassemble or modify the equipment. High-voltage internal parts may cause electrical shock.
- Do not store the equipment in dusty or humid places. This is to prevent fire or electrical shock.
- Before using the equipment on board airplanes or in hospitals, make sure use is permitted. Electromagnetic waves emitted by the equipment may interfere with instrumentation or medical equipment.
- Do not hold the camera in the same position for long periods of time. Even if the camera does not feel too hot, prolonged contact with the same body part may cause skin redness or blistering due to low-temperature contact burns. Using a tripod is recommended for people with circulation problems or very sensitive skin, or when using the camera in very hot places.

Cautions: Follow the cautions below. Otherwise, physical injury or property damage may result.

- Do not leave the equipment in a hot car interior or near high-temperature objects. The equipment may become hot and cause burns if touched.
- Do not leave the product in a low-temperature environment for an extended period of time. The equipment will become cold and may cause injury when touched.
- Do not cover or wrap the transmitter with a cloth. This may trap heat inside, posing a risk of fire.
- Do not use paint thinner, benzene, or other organic solvents to clean the transmitter. This poses a risk of fire and may be hazardous to your health.

If you experience any malfunctions, problems, or damage to the product, contact the nearest Canon Service Center or the dealer from whom you purchased the product.

Handling Precautions

- The transmitter is a precision instrument. Do not drop it or subject it to physical shock.
- The transmitter is not waterproof. Do not use it underwater.
- Wipe off any moisture with a dry and clean cloth. If the transmitter has been exposed to salty air, wipe it with a clean, well-wrung wet cloth.
- Never leave the transmitter near any equipment that generates a strong magnetic field, such as magnets or electric motors.
- Do not leave the transmitter in excessive heat, such as in a vehicle in direct sunlight. High temperatures may damage the transmitter.
- Do not wipe the transmitter using cleaners containing organic solvents. For stubborn dirt, take it to the nearest Canon Service Center.
- Avoid storing the transmitter where there are chemicals that result in rust and corrosion such as in a chemical lab.

Nomenclature

LCD panel

* Bluetooth connectivity is not supported on the EOS 5D Mark IV.

Case and other accessories

Interface cables

For use with the EOS 5D Mark IV

For use with cameras equipped with a mini USB 2.0 (Mini-B) terminal (Not for use with the EOS 5D Mark IV)

Installing and Removing the Battery

Use one Battery Pack LP-E6N (or LP-E6) to power the transmitter. When replacing the transmitter's battery, be sure to turn the transmitter off before opening the battery compartment cover.

Also note that the transmitter is not sold with a battery or charger. If you do not own these accessories, they are available for purchase separately.

Installing the Battery

1 Open the cover.

- Push the lever down and open the cover.

2 Insert the battery.

- Insert the end with the battery contacts.
- Insert the battery all the way until it locks into place.

3 Close the cover.

- Press the cover up until it clicks into place.

Battery Check

The remaining battery level is displayed when you turn the transmitter on. A blinking battery icon () indicates that the battery will be depleted soon.

Icon						
Level (%)	100 – 70	69 – 50	49 – 20	19 – 10	9 – 1	0

Removing the Battery

1 Open the cover.

- Push the lever down and open the cover.

2 Remove the battery.

- Press the battery lock lever in the direction of the arrow to unlock, and then remove the battery.
- To prevent a short-circuit, be sure to always attach the protective cover to the battery.

Using a Household Power Outlet

You can power the transmitter with a household power outlet by using the DC Coupler DR-E6 and AC Adapter AC-E6N (each sold separately).

DC coupler cord hole

1 Insert the DC coupler.

- Open the battery compartment cover and open the DC coupler cord hole cover.
- Insert the DC coupler securely until it locks and put the cord through the hole.
- Close the cover.

2 Connect the DC coupler's plug.

- Connect the DC coupler's plug and the AC adapter's connector securely.

3 Connect the power cord.

- Connect the power cord as shown in the illustration.
- After using the camera, unplug the power plug from the power outlet.

- !**
- Do not connect or disconnect the power cord or DC coupler while leaving the transmitter's power switch set to the **<ON>** position.
 - Do not connect both the transmitter and camera to a household power outlet and use them simultaneously. It may cause malfunction to the nearby electronic devices. For more information, contact your dealer or nearest Canon Service Center.

 AC Adapter Kit ACK-E6 (sold separately) can also be used.

Attaching to the Camera

When connecting the transmitter to the camera, always use one of the interface cables included with the transmitter.

- 1 Turn off both the transmitter and camera.**

- 2 Attach the transmitter's <DIGITAL> port cap.**

- Attach the cap for preventing cable disconnection.

- 3 Connect the transmitter and camera.**

- For the interface cable, use either IFC-40AB II or IFC-150AB II.
- Attach the cable protector to the camera and run the cable through the clamp.
- For cable protector instructions, refer to the camera instruction manual.

- 4 Turn on both the transmitter and camera.**

- ▶ The transmitter's <POWER> lamp will light and <W> will be displayed on the transmitter's LCD panel.

- Before disconnecting the cable, turn off both the transmitter and camera.
- If you turn on/off the transmitter or connect/disconnect the interface cable during Live View shooting or movie shooting, Live View shooting or movie shooting will stop.
- If wireless functions are in use, noise may be recorded regardless of the use of the built-in microphone(s) or an external microphone. It is recommended that you do not use wireless functions when shooting movies.

 If the transmitter's <POWER> lamp blinks, it means that the transmitter and camera are not properly connected. Check the connection.

Example of Using the Case and Strap

Connect the transmitter to the camera using IFC-150AB II.

1

Basic Network Settings

Complete the basic network settings by using the menu screen on the camera's LCD monitor.

Preparation

- **[FTP trans.]**

You can transfer captured images to an FTP server.

Images can be automatically transferred as you shoot them, or you can select images to be transferred later.

Computer Operating Systems

Use of **[FTP trans.]** requires that one of the following operating systems be installed on a computer. In addition, the computer must be set up as an FTP server in advance.

- **Windows 10 (ver. 1607 or later)**
- **Windows 8.1, Windows 8.1 Pro**

For instructions on setting up a computer as an FTP server, refer to the documentation provided with each device or contact the manufacturer.

- **[EOSUtility]**

You can perform remote shooting over a LAN using EOS Utility (EOS software).

In addition to remote shooting, almost all EOS Utility camera operations are supported, because this option utilizes a LAN instead of an interface cable.

Requires a computer with EOS Utility (EOS software) installed.

- **[WFTserver]**

You can perform advanced remote shooting or view images stored in the camera by connecting to the transmitter from a web browser on a computer, smartphone, or other device, as easily as accessing a Web site.

Browsers

The following operating systems and web browsers have been confirmed to be compatible with the transmitter. Depending on your environment, operation may differ.

- Windows 8.1, Windows 7: Google Chrome Ver. 44
- Windows 8.1, Windows 7: Internet Explorer 11
- OS X (operating system version 10.10): Safari Ver. 8.0
- iOS (operating system version 8.4): Safari
- Android (operating system version 4.4): Google Chrome

- * Operation on the above operating systems and web browsers cannot be guaranteed for all the terminals.
- * Not available unless the web browser is set to allow cookies.
- * Not available unless the web browser is set to use JavaScript.
- * Movies cannot be played back unless the web browser supports HTML 5.

- **[LinkedShot]**

You can perform linked shooting using multiple compatible cameras with WFT series transmitters attached. This feature lets you link up to 10 receiver cameras to the sender camera on which you will release the shutter. Note that there will be a slight delay after you release the sender camera shutter before the receiver cameras shoot. Movie shooting is not supported.

For subsequent operations, see page 71.

- **[Sync time between cameras]**

You can set the sender camera time on up to 10 receiver cameras. Note that even after synchronization, there will be a margin of error between sender and receiver camera times.

Set up multiple cameras of the same camera model with WFT-E7 series transmitters attached.

For subsequent operations, see page 85.

Connecting Using an Access Point

When connecting using an access point, connect the target device to the access point in advance.

Transfer of Movies over Wireless LAN

Because of the large size of individual movie files, wireless LAN file transmission takes some time. Set up an environment where each device can achieve stable communication with the access point and the transmitter by referring to the information on page 125.

Displaying the Connection Wizard

This section describes the process following the connection instructions. If an error is displayed, see “Troubleshooting Guide” in Chapter 9 (p.107) and check the settings.

- Pressing the shutter button or other camera controls during configuration using the connection instructions will close the connection instructions. Do not press the shutter button or other controls until configuration is finished.

1 Turn on the transmitter.

2 Select [Communication settings].

- Under the [4] tab, select [Communication settings], then press <SET>.

3 Select [WFT settings].

4 Select [Connection settings].

5 Select [SET*].

6 Select [Connection wizard].

- ▶ The <LAN> lamp on the transmitter will blink in green.

7 Select the communication method.

- Select the communication method by referring to page 18.
- Select [OK] and press <SET> to go to the next screen.

8 Select the LAN type.

- Select [OK] and press <SET> to go to the next screen.

When [Wireless] is selected

- The [Select a network] screen is displayed. For subsequent operations, see page 23.

When [Wired] is selected

- The [IP address set.] screen is displayed. For subsequent operations, see page 30.
- Use a Category 5e or higher STP LAN cable. (STP: Shielded Twisted Pair)

Checking the Type of Access Point

To connect using an access point, check if the access point supports WPS* that allows easy connection between Wi-Fi devices.

If you do not know if the access point you use is WPS-compatible, refer to the access point instruction manual or other documentation.

* Wi-Fi Protected Setup

- **When WPS is supported**

The following two connection methods are available. Connection can be established easier with WPS (PBC mode).

- Connecting via WPS (PBC mode): Perform the operations described on page 24.
- Connecting via WPS (PIN mode): Perform the operations described on page 25.

- **When WPS is not supported**

- Connecting to a detected network manually: Perform the operations described on page 27.

Access Point Encryption

The transmitter supports the following options for **[Authentication]** and **[Encryption settings]**. Therefore, when connecting to a detected network manually, the encryption used by the access point must be one of the following.

- **[Authentication]**: Open system, Shared key, or WPA/WPA2-PSK
- **[Encryption settings]**: WEP, TKIP, or AES

● **If stealth functions of the access point are active, connection may be disabled. Deactivate stealth functions.**

- When connecting to a network that has a network administrator, ask the administrator about the detailed setting procedures.

If the network you use filters by MAC address, register the MAC address of the transmitter at the access point. The MAC address can be checked on the **[Function settings]** screen (p.104).

Connecting via WPS (PBC Mode)

The instructions in this chapter are continued from page 23.

This is a connection mode available when using an access point compatible with WPS. In pushbutton connection mode (PBC mode), the camera and the access point can be connected simply by pressing the WPS button on the access point.

- If multiple access points are active in the surrounding area, it may be more difficult to establish a connection. In such a case, try using **[WPS (PIN mode)]** to establish a connection.
- Check the position of the WPS button on the access point in advance.
- It may take approx. one minute to establish a connection.

1 Select [Connect with WPS].

2 Select [WPS (PBC mode)].

- Select **[OK]** and press **<SET>** to go to the next screen.

3 Connect to the access point.

- Press the access point's WPS button. For details about where the button is located and how long to press it, refer to the access point's instruction manual.
- Select **[OK]** and press **<SET>** to establish a connection with the access point.
- ▶ When a connection with the access point is established, the **[IP address set.]** screen (p.30) is displayed.

Connecting via WPS (PIN Mode)

The instructions in this chapter are continued from page 23.

This is a connection mode available when using an access point compatible with WPS. In PIN code connection mode (PIN mode), an 8-digit identification number specified on the camera is set at the access point to establish a connection.

- Even if there are multiple access points active in the surrounding area, a relatively reliable connection can be established using this shared identification number.
- It may take approx. one minute to establish a connection.

1 Select [Connect with WPS].

2 Select [WPS (PIN mode)].

- Select [OK] and press <SET> to go to the next screen.

3 Specify the PIN code.

- At the access point, specify the 8-digit PIN code displayed on the camera's LCD monitor.
- For instructions on setting PIN codes at the access point, refer to the access point's instruction manual.
- After the PIN code is specified, select [OK] and press <SET>.

4 Connect to the access point.

- Select [**OK**] and press < **SET** > to establish a connection with the access point.
- ▶ When a connection with the access point is established, the [**IP address set.**] screen (p.30) is displayed.

Connecting to a Detected Network Manually

The instructions in this chapter are continued from page 23.

Establish a connection by selecting the SSID (or ESS-ID) of the access point to connect to from a list of active access points nearby.

Selecting the Access Point

1 Select an access point.

- Turn the <⌚> dial to select the access point to connect to from the list of access points.

- (1) SSID
(2) An icon is displayed if the access point is encrypted
(3) Channel used

[Refresh] and [Manual settings]

- Scroll down the screen in step 1 to display **[Refresh]** and **[Manual settings]**.
- To search for access points again, select **[Refresh]**.
- To configure settings for the access point manually, select **[Manual settings]**. Enter the SSID using the virtual keyboard and then configure settings following the instructions displayed.

Entering the Access Point Encryption Key

- Enter the encryption key (password) specified for the access point. For details on the specified encryption key, refer to the access point's instruction manual.
- The screens displayed in steps 2 to 4 below vary depending on the authentication and encryption specified for the access point.
- Go to page 30 when the **[IP address set.]** screen is displayed instead of the screens for steps 2 to 4.

2 Select a key index.

- The **[Key index]** screen is displayed only if WEP encryption is used by the access point.
- Select the key index number specified for the access point, then press **<SET>**.
- Select **[OK]** and press **<SET>** to go to the next screen.

3 Select the format and the number of characters used for the key.

- Select **[OK]** and press **<SET>** to go to the next screen.

4 Enter the encryption key.

- Enter the encryption key using the virtual keyboard (p.29), then press the **<MENU>** button.
- ▶ When a connection with the access point is established, the **[IP address set.]** screen (p.30) is displayed.

Virtual Keyboard Operation

- **Changing the entry area**
Press the <Q> button to toggle between the top and bottom entry areas.
- **Moving the cursor**
Use <⌚> or <⌚> in the top area to move the cursor.
- **Entering text**
In the bottom area, use <⌚> or <⌚> to select a character, then press <SET> to enter it.
You can check how many characters you have entered and how many more can be entered by referring to [*/] on the upper right of the screen.
- **Changing the entry mode***
Select [Aa=1@] at the bottom right of the bottom entry area. Each time you press <SET>, the entry mode will change as follows: Lower case → Numerals / Symbols 1 → Numerals / Symbols 2 → Upper case.
* When [Touch control: Disable] is set, you can enter all characters on one screen.
- **Deleting a character**
Press the <🗑️> button to delete one character.
- **Finishing the text entry**
Press the <MENU> button to confirm what you have entered and exit. If a confirmation dialog is displayed, select [OK] to exit.
- **Canceling the text entry**
Press the <INFO> button to cancel text entry and exit. If a confirmation dialog is displayed, select [OK] to exit.

Setting the IP Address

Select [Auto setting].

- Select [**OK**] and press <  > to display the setting screen for the communication method (p.31).
- If [**Auto setting**] results in an error or if you want to specify the settings manually, see page 132.

The IP address can only be set automatically in environments using DHCP servers, or access points or routers with DHCP server functionality, such that IP addresses and related settings are assigned and configured automatically.

Completing Settings for the Communication Method

The following instructions are for settings screens that vary depending on the communication method. Read the page that introduces the selected communication method.

Transferring Images to an FTP Server

By connecting to an FTP server, you can transfer images stored in the camera to a computer.

With FTP transfer, you can automatically transfer images to the FTP server as you shoot or transfer a set of shots together.

- The instructions in this chapter are continued from Chapter 1.

Configuring FTP Server Connection Settings

These instructions are continued from Chapter 1.

1 Select an FTP mode.

- To establish security for FTP transfer using a root certificate, select **[FTPS]**.
- For root certificate settings, see page 37.
- Select **[OK]** and press **<SET>** to go to the next screen.

2 Select **[Address setting]**.

- ▶ The virtual keyboard is displayed.

3 Enter the FTP server's server name or IP address.

- If you have set the IP address setting to **[Auto setting]** or the DNS address setting to **[Manual setting]**, the screen on the left is displayed.
- For instructions on screen operations, see “Virtual Keyboard Operation” (p.29).
- If you have set the DNS address setting to **[Disable]**, the screen on the left is displayed.
- Turn the **<DIAL>** to move the input position in the upper area and turn the **<DIAL>** to select the number. Press **<SET>** to enter the selected number.

FTP server

Address setting

Port number setting 00021

Address
192.168.1.20

Cancel OK

4 Set the port number.

- [Port number setting] should usually be 00021.
- Select [OK] and press <SET> to go to the next screen.

Passive mode

☐ Enable

☒ Disable

Cancel OK

5 Set the passive mode setting.

- Select [OK] and press <SET> to go to the next screen.
- If an Error 41 ("Cannot connect to FTP server") is displayed in step 8, setting [Passive mode] to [Enable] may resolve it.

Proxy server

Proxy server Disable

Address setting

Port number setting 10021

Address
0.0.0.0

6 Set the proxy server.

- Select [OK] and press <SET> to go to the next screen.

Login method

☒ Anonymous

☐ Login password

Login name
anonymous

Cancel OK

7 Set the login method.

- Select [OK] and press <SET> to go to the next screen.

8 Set the target folder.

- Select [**Root folder**] to have images saved in the root folder as specified in FTP server settings (p.49).
- Select [**Select folder**] to specify a target folder in the root folder. If no folder exists, a folder will be created automatically.
- Select [**OK**] and press <Ⓕ> to go to the next screen.
- ▶ The <LAN> lamp on the transmitter will light up in green.

9 Select [OK].

- Press <Ⓕ>. A connection completion screen will appear.

10 Select [OK].

- Press <Ⓕ> to return to the [**WFT settings**] screen.
- Settings information is stored in the camera. It is not stored in the transmitter.

The connection settings for FTP transfer are now complete. During image transfer, the <LAN> lamp on the transmitter blinks in green.

Importing a Root Certificate for FTPS

If the FTP mode is set to **[FTPS]** when configuring the connection settings, the same root certificate as the FTP server must be imported to the camera.

- Only the root certificate whose file name is “**root.cer**”, “**root.crt**”, or “**root.pem**” can be imported to the camera.
- Only one root certificate file can be imported to the camera.

Insert a card containing the root certificate file in advance.

1 Select **[Communication settings]**.

- Under the [**4**] tab, select **[Communication settings]**, then press < **(SET)** >.

2 Select **[FTP transfer settings]**.

3 Select **[Set root certif]**.

4 Select **[Load root certif from card]**.

5 Select **[OK]**.

- ▶ The root certificate is imported.
- Select **[OK]** on the confirmation dialog to return to the **[Set root certif]** screen.

- Select **[Delete root certificate]** on the screen for step 4 to delete the root certificate imported to the camera. Select **[View root certificate details]** to check the issuer, subject, validity period, and other information.

 You can import a certificate from the card selected for **[Record/play]** or **[Playback]** under **[1: Record func+card/folder sel.]**.

Transferring Images Individually

Automatic Image Transfer After Each Shot

An image can be automatically transferred to the FTP server immediately after shooting. You can also continue still photo shooting even while images are being transferred.

- Before shooting, be sure to insert a card into the camera. If you shoot without recording images, they cannot be transferred.
- Note that automatic transfer of movies during shooting is not supported. Transfer the movie after shooting, as described on pages 44-48.

1 Select [Communication settings].

- Under the [**f4**] tab, select [Communication settings], then press < (SET) >.

2 Select [FTP transfer settings].

3 Select [Automatic transfer].

- Select [Enable].

4 Take the picture.

- ▶ The captured image is transferred to the FTP server.

Images cannot be erased during image transfer.

- During continuous shooting, images are transferred to the FTP server in the order they are captured.
- The captured images are also stored on the card.
- Any images of which transfer is interrupted or failed will be transferred automatically when the connection is recovered (p.43). These images can also be re-transferred in batch at a later time (p.44).

Transferring the Current Image

Simply play back an image and press <SET> to transfer it. You can also continue still photo shooting even while images are being transferred.

1 Select [Transfer with SET].

- On the setting screen of FTP transfer, select [Transfer with SET].
- Select [Enable].

2 Select the image.

- Press the <▶> button on the camera.
- Select the image to transfer, then press <SET> to transfer the image.
- **Movies cannot be transferred this way. Selecting a movie and pressing <SET> will display the movie playback panel.**

Selecting Particular Sizes or Types of Images to Transfer

You can select which images to transfer when recording images of different sizes to a CF card and SD card simultaneously or when shooting in RAW+JPEG image quality.

Select **[Transfer type/size]** in step 3 on page 40 to select the size or type of images to transfer.

1 Select **[Transfer type/size]**.

2 Select the size and type of images to transfer.

- To transfer smaller JPEGs when the camera is set up to record larger JPEGs to either a CF card or SD card and smaller JPEGs to the other, set **[JPEG size to trans.]** to **[Smaller JPEG]**.
- When the camera is set up to record RAW images to either the CF card or SD card and JPEGs to the other, specify which images to transfer in the **[RAW+JPEG transfer]** setting. Similarly, complete the same setting when RAW+JPEG images are recorded simultaneously to a single card.
- When images of the same size are recorded to both a CF card and SD card simultaneously, images recorded to the card selected for **[Record/play]** or **[Playback]** in **[Record func+card/folder sel.]** under the **[1]** tab are transferred.

Auto Retry if Transfer Fails

If transfer fails, the <LAN> lamp on the transmitter blinks in red. In this case, press the <MENU> button, select [**Communication settings**] under the [4] tab, and press <SET>. When the screen shown on the left is displayed, check the error code number and see page 108 to eliminate the cause of the

error.

Once the cause of the error is eliminated, the images whose transfer previously failed will be re-transferred automatically. With this option activated, transfer is attempted again automatically after failure, whether automatic transfer is used or captured images are transferred via FTP. Note that when you cancel image transfer or turn off the transmitter or camera, the image will not be re-transferred automatically. See page 44 and transfer the image.

By setting the power saving function on the [**Function settings**] screen (p.104), you can log off the transmitter from the FTP server after transfer and stop the LAN connection.

Batch Transfer

After shooting, you can select multiple images as desired and transfer them all at once. You can also transfer unsent images or images that could not be sent previously. Additionally, you can add a caption before transferring images.

You can also continue still photo shooting even while images are being transferred.

Selecting the Images to be Transferred

● Selecting Images

1 Select [Image transfer].

- Under the [▶2] tab, select [Image transfer], then press <SET>.

2 Select [Image sel./transfer].

3 Select [Sel.Image].

4 Select images to transfer.

- Turn the <ⓘ> dial to select the image to be transferred, then press <SET>.
- Turn the <ⓘ> dial to display the [✓] on the screen's upper left, then press <SET>.
- If you press the <Q> button and turn the <ⓘ> dial counterclockwise, you can select an image from a three-image display. To return to the single-image display, turn the <ⓘ> dial clockwise.
- To select other images to be transferred, repeat step 4.

5 Transfer the image.

- Select [FTP transfer], then press <SET>.
- Select [OK] on the confirmation dialog to transfer the image.
- Images selected with [Sel. [Folder Icon]] and [All images] can also be transferred in this way.

- You can also transfer shot movies.
- When [Sel. Image] is selected, you can check the transfer history on the upper left of the screen: No mark: Not selected. ✓: Selected for transfer. X: Transfer failed. ○: Transfer succeeded.
- The procedures for [RAW+JPEG transfer] (p.47) and above steps 1 to 4 can also be performed even while the camera is not connected to an FTP server.

● Selecting

Select [**Sel. **] and select [**Folder images not transfer'd**]. When you select a folder, all the images in that folder not yet transferred to the FTP server will be selected.

Selecting [**Folder images failed transf.**] will select the selected folder's images that failed to transfer.

Selecting [**Clear folder transf. history**] will clear the transfer history of the images in the selected folder. After clearing the transfer history, you can select [**Folder images not transfer'd**] and again transfer all the images in the folder.

● All images

If [**All images**] is selected and you select [**Card images not transferred**], all the images in the card not yet transferred to the FTP server will be selected.

For a description of [**Card images failed transfer**] and [**Clear card's transf. history**], see "**Sel. **".

Transferring RAW+JPEG Images

For RAW+JPEG images, you can specify which image to transfer.

In step 2 on page 44, select

[RAW+JPEG transfer], and select the image to be transferred: **[JPEG only]**, **[RAW only]**, or **[RAW+JPEG]**.

- The **[RAW+JPEG transfer]** setting switches in tandem with the **[RAW+JPEG transfer]** setting under **[4: Communication settings] → [FTP transfer settings] → [Transfer type/size]** (p.42).

During the image transfer, certain menu options cannot be used.

Transferring Images with a Caption

When you select **[Transfer with caption]**, you can add a registered caption to each image before transfer. This is convenient if you want to inform the recipient of the printing quantity, for example. The caption is also added to images stored in the camera.

- You can check captions added to images by examining the user comments in the Exif information.
- **For instructions on creating and registering captions, see page 130.**

1 Select **[Image transfer]**.

- Under the **[▶ 2]** tab, select **[Image transfer]**, then press **< (SET) >**.

2 Select **[Transfer with caption]**.

- ▶ The last image played back is displayed.

3 Set a caption.

- Select **[Caption]** and press **< (SET) >**, then select the content of the caption on the displayed screen.

4 Select **[Transfer]**.

- The image is transferred with the caption. When the transfer is complete, the **[Image transfer]** screen will reappear.

! It is not possible to manually select images on the **[Transfer with caption]** screen. To select another image for transfer with a caption, play back that image, then follow these steps.

Viewing Transferred Images

Images transferred to the FTP server are stored in the following folder as specified in the FTP server settings.

Target Folders for the FTP Server

- Under the default settings of the FTP server, images are stored in [**C drive**] → [**Inetpub**] folder → [**ftproot**] folder, or in a subfolder of this folder.
- If the root folder of the transfer destination has been changed in the FTP server settings, ask the FTP server administrator where images are transferred.

Folders for Image Storage

Under the default settings, transferred images will be stored in the root folder specified in the FTP server settings, in a folder structure such as “A/DCIM/100EOS5D”, which is automatically created.

Note that when a CF card is selected for recording and playback, a folder structure such as “A/DCIM/100EOS5D” will be automatically created; when an SD card is selected, the folder structure will be “B/DCIM/100EOS5D”. (Images will be stored separately, with CF card images in folder A and SD card images in folder B.)

[illegible]

3

Operating Remotely Using EOS Utility

Using EOS Utility, you can view images stored in the camera or save them to a computer. Additionally, you can operate the camera remotely to take a picture or change camera settings using EOS Utility.

Almost all EOS Utility camera operations are supported, because this option utilizes a LAN instead of an interface cable.

- The instructions in this chapter are continued from Chapter 1.
- Install EOS Utility on the computer before setting up a connection (p.19).

Configuring EOS Utility Connection Settings

These instructions are continued from Chapter 1.

- To establish a connection, operations on the computer are required. For details, refer to the computer's instruction manual.
- The configuration procedure is as follows, using Windows 8.1 as an example.

Operation on the Camera-1

1 Select [OK].

- Select [OK] and press <SET>. The following message is displayed.
"*****" represents the last six digits of the MAC address of the transmitter.

Operation on the Computer

2 Start EOS Utility on the computer.

3 In EOS Utility, click [Pairing over Wi-Fi/LAN].

- If a firewall-related message is displayed, select [Yes].

4 Click [Connect] on the computer.

- Select the camera to connect to, then click **[Connect]**.
- If multiple cameras are displayed, identify the camera to connect to by its MAC address displayed on the camera's LCD monitor.
- The MAC address of the transmitter can also be checked on the **[Function settings]** screen (p.104).

Operation on the Camera-2

5 Select [OK].

- When the camera detects the computer on which you clicked **[Connect]** in step 4, the screen on the left is displayed.
- Select **[OK]** and press **<SET>**. A connection completion screen will appear.

6 Select [OK].

- Press **<SET>** to return to the **[WFT settings]** screen.
- ▶ The **<LAN>** lamp on the transmitter will light up in green.
- Settings information is stored in the camera. It is not stored in the transmitter.

The settings for connecting to EOS Utility are now complete.

- There is no need to complete pairing again if you will continue using a particular camera to which the transmitter is attached and computer together after pairing without changing the settings.

Using EOS Utility

For EOS Utility instructions, refer to the EOS Utility Instruction Manual. In addition to remote shooting, various camera operations are available.

- ⚠ While connected, some menu items are unavailable.
- In remote shooting, the AF speed may become slower.
- Depending on the connection status, image display or shutter release may be delayed.
- In Remote Live View shooting, the rate of image transmission is slower compared to a connection via an interface cable. Therefore, moving subjects cannot be displayed smoothly.

⚠ **Do not hold the camera in the same position for long periods of time.** Even if the camera does not feel too hot, prolonged contact with the same body part may cause skin redness or blistering due to low-temperature contact burns. Using a tripod is recommended for people with circulation problems or very sensitive skin, or when using the camera in very hot places.

4

Operating Remotely Using WFT Server

Using a web browser, you can view images stored in the camera or save them to a computer, smartphone, etc. Additionally, you can operate the camera remotely to take a picture or change camera settings using a web browser.

- The instructions in this chapter are continued from Chapter 1.

Configuring WFT Server Connection Settings

These instructions are continued from Chapter 1.

Enter a login name and password for connecting to the camera from a computer. The login name and password you specify here are used when connecting to the camera.

1 Select [User *].

- With WFT Server, you can connect the camera to up to three devices. Select a user number to prevent conflicts when other devices are connected simultaneously.

2 Select [Login name] or [Password].

- ▶ The virtual keyboard is displayed. See page 29 to enter a login name and password.

3 Select [OK].

- After specifying the login name and password, select [OK] and press **<SET>**.
- ▶ The screen for step 1 will reappear.
- To add a user, repeat steps 1 to 3.

4 Select [OK].

- Select [OK] and press <SET>. A connection completion screen will appear.

5 Select [OK].

- Press <SET> to return to the [WFT settings] screen.
- Settings information is stored in the camera. It is not stored in the transmitter.

The settings for connecting to WFT Server are now complete.

You can change the WFT account settings on the [Function settings] screen (p.104). The port number setting can also be changed on the [Function settings] screen. Note that there is normally no need to change the port number (80).

Displaying WFT Server

In the web browser, display WFT Server, a screen for transmitter operations. Connect the camera to a computer, smartphone, etc. via LAN in advance.

Checking the Camera's IP Address

To access the camera from a web browser, the camera's IP address displayed in step 6 must be entered in the address field of the web browser.

1 Select [Communication settings].

- Under the [**4**] tab, select [Communication settings], then press < **SET** >.

2 Select [WFT settings].

3 Select [Connection settings].

4 Select [SET* WFTserver].

5 Select [Confirm settings].

- The settings are displayed.

6 Check the settings.

- Turn the <⌚> dial to display other screens.
- Write down the IP address.
- After checking it, press the <MENU> button to exit the confirmation dialog.

Logging in to WFT Server

7 Start the web browser.

- Start a web browser on a computer, smartphone, etc.

8 Enter the URL.

- In the address field, enter the IP address you wrote down in step 6.
- Press the <Enter> key.

9 Enter the [Login name] and [Password].

- Enter the [Login name] (user name) and [Password] specified on page 56.
- Press [OK] to display the WFT Server screen.

10 Select the language.

- Select a language at the bottom of the screen.

- WFT Server cannot be used unless the web browser supports JavaScript.
- While connected, some menu items are unavailable.

Viewing Images

You can browse images on the camera's card as follows.

1 Press [▶] **Viewer**.

- ▶ The image viewing screen is displayed.

2 Select the card and folder.

- Press the [CF] or [SD] tab to select a card.
- Press the folder name on the right of the selected tab to select a folder from the pull-down list.

3 Select an image.

- To view other images, change the screen with [◀ ▶] or [⏮ ⏭] at the bottom of the screen.
- You can specify how many thumbnails are shown per screen from the pull-down list on the upper right of the screen.
- When you add [✓] to the checkbox beside [🔄], the screen will be refreshed periodically.
- For movies, [MOV] or [MP4] is displayed beside the file names.

4 Download images.

- When you select a thumbnail, the image is displayed at a larger size.
- Press [] to download the image.
- Press [] or [] to display the previous or next image.
- Press [] to return to the image viewing screen.

Still photo playback screen

Movie playback screen

 Note that due to the performance of computers and smartphones, or browsers used, the following may occur: Images cannot be displayed, images are displayed slowly, or images cannot be downloaded to the devices.

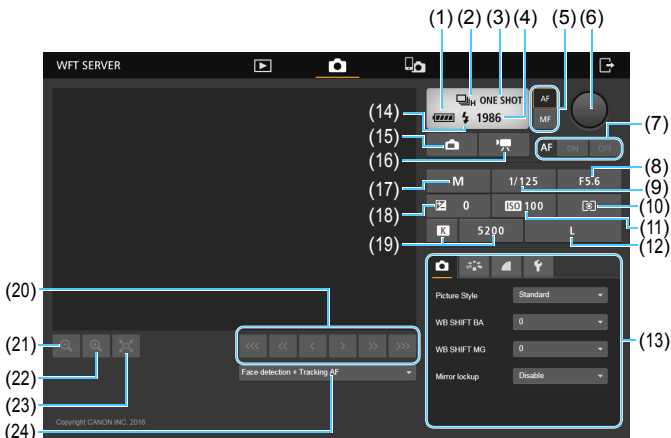

Shooting Remotely [Camera control]

You can use WFT Server to shoot remotely.

1 Press [Camera control].

- ▶ The advanced capture screen is displayed.

- | | |
|------------------------------|--|
| (1) Battery check | (13) Menu |
| (2) Drive mode | (14) Flash-ready |
| (3) AF mode | (15) Still photo Live View shooting button |
| (4) Possible shots | (16) Movie shooting button |
| (5) AF/MF switching button | (17) Shooting mode |
| (6) Shutter button | (18) Exposure compensation |
| (7) AF button | (19) White balance |
| (8) Aperture | (20) Manual focus button |
| (9) Shutter speed | (21) Reduce button |
| (10) Metering mode | (22) Magnify button |
| (11) ISO speed | (23) Live View image size switching button |
| (12) Image-recording quality | (24) AF method |

2 Set the lens's focus mode switch to <AF>.

- When you press and let go of the Shutter button (6), the camera will autofocus and take a picture.

- Drive mode (2) displays the drive mode set on the camera. Note that even if the camera's drive mode is set to continuous shooting, single shooting will apply for remote shooting.
- When the camera's Live View shooting/Movie shooting switch is set to <[Live View]>, still photo shooting is not possible.
- Anti-flicker shooting will be set to **[Disable]** automatically.
- If Mirror lockup is set to any setting other than **[Disable]**, shooting is not possible. Set it to **[Disable]** in the Menu (13).

 With One-Shot AF, the picture is not taken if focus is not achieved. It is recommended that you display Live View image and focus manually.

Displaying Live View Image for Shooting

1 Display Live View image.

- Press the Still photo Live View shooting button (15).

2 Adjust the focus.

Using autofocus

- Press [ON] on the AF button (7) to autofocus.

Focusing manually

- Press the buttons < [Left Arrow] >, < [Left Arrow] [Left Arrow] >, < [Left Arrow] [Right Arrow] >, < [Left Arrow] [Right Arrow] [Right Arrow] >, and < [Right Arrow] > to adjust the focus.
To focus more closely, press < [Left Arrow] >, < [Left Arrow] [Left Arrow] >, or < [Left Arrow] [Left Arrow] [Left Arrow] >. To focus farther away, press < [Right Arrow] >, < [Right Arrow] [Right Arrow] >, or < [Right Arrow] [Right Arrow] [Right Arrow] >.
- Three levels of focus adjustment are available.
< [Left Arrow] [Left Arrow] [Left Arrow] > < [Right Arrow] [Right Arrow] [Right Arrow] >: Largest increment
< [Left Arrow] [Left Arrow] > < [Right Arrow] [Right Arrow] >: Intermediate increment
< [Left Arrow] > < [Right Arrow] >: Smallest increment

- If Live View image is not displayed, enable Live View shooting in the Menu (13).
- To make Live View image display more responsive, press the Live View image size switching button (23). Live View image will be displayed at a smaller size, improving responsiveness. To restore the original size, press the button again.

3 Configure the shooting settings.

- Select setting items (such as image-recording quality) to view the setting details, which you can configure.
- Complete the settings as needed.

4 Take the picture.

- Press the Shutter button (6). When you let go of the button, the picture is taken.
- ▶ The captured image is displayed.
- Captured images are stored on the camera's card.
- To download images, see "Viewing Images" (p.61).

 The Live View image may freeze when shooting if the camera is accessed by multiple devices.

Shooting Movies

Press the Movie shooting button (16) to display the movie shooting screen.

- The setting procedures are the same as still photo shooting.
- Press the Shutter button (6). When you let go of the button, movie shooting will start.
- ▶ During movie shooting, the red [●] on the Shutter button (6) changes to a white [□].
- Press the Shutter button (6) again. When you let go of the button, movie shooting will stop.

Do not hold the camera in the same position for long periods of time.

Even if the camera does not feel too hot, prolonged contact with the same body part may cause skin redness or blistering due to low-temperature contact burns. Using a tripod is recommended for people with circulation problems or very sensitive skin, or when using the camera in very hot places.

Shooting Remotely [Simple control]

Although detailed function settings are not available on the basic capture screen, it is convenient for shooting remotely using a smartphone or other small-screen devices due to the compact design of the operation screen.

1 Press [Simple control].

- ▶ The basic capture screen and Live View image are displayed.

Live View image screen

Magnify/reduce button

Manual focus button

< << > < << > < < >: Focuses more closely
< > < >> > < >> >: Focuses farther away

Levels of focus adjustment

< << > < >> >: Largest increment
< << > < >> >: Intermediate increment
< < > < > >: Smallest increment

Shutter button

AF button

Still photo/movie shooting switching button

2 Adjust the focus.

- Set the lens's focus mode switch to <AF>.

Using autofocus

- Press [ON] on the AF button to autofocus.

Focusing manually

- Press the buttons < [Left Arrow] >, < [Right Arrow] >, < [Zoom In] >, < [Zoom Out] >, < [Left Arrow] >, < [Right Arrow] >, < [Zoom In] >, and < [Zoom Out] > to adjust the focus.

3 Take the picture.

- Press the Shutter button. When you let go of the button, the picture is taken.
 - ▶ The captured image is displayed.
- Captured images are stored on the camera's card.
- To download images, see "Viewing Images" (p.61).

Shooting Movies

Press the [Camera Icon] or [Movie Icon] button to switch between the still photo shooting screen and movie shooting screen.

- The setting procedures are the same as still photo shooting.
- Press the Shutter button. When you let go of the button, movie shooting will start.
 - ▶ During movie shooting, the red [●] on the Shutter button changes to a white [□].
- Press the Shutter button again. When you let go of the button, movie shooting will stop.

Using WFT Server in Linked Shooting

Remote shooting in WFT Server can be used in conjunction with the transmitter's "Linked Shooting" function (p.71). Additionally, images on the sender camera's card and receiver cameras' cards can be viewed and downloaded.

Linked Shooting

Receiver camera

Receiver camera

Receiver camera

Receiver camera

Sender camera

WFT Server

5

Linked Shooting

With linked shooting, up to 10 receiver cameras can be linked in a wireless LAN to the sender camera on which you will release the shutter.

Any cameras compatible with linked shooting, when they have WFT series transmitters attached, can be used as receiver cameras, regardless of model.

Note that there will be a slight delay after you release the sender camera shutter until the receiver camera shutters are released. Movie shooting is not supported.

Receiver camera

Sender camera

Basic Linked Shooting

Link the sender camera and receiver cameras for basic linked shooting.

Preparing Receiver Cameras

First, set up receiver cameras by operating the cameras to use as receivers. When using multiple receiver cameras, operate all receiver cameras in the same way.

1 Select [Communication settings].

- Under the [4] tab, select [Communication settings], then press <SET>.

2 Select [WFT settings].

3 Select [Connection settings].

4 Select [LinkedShot].

- Turn the <DISP> dial to select [LinkedShot] at the bottom.

5 Select [Connection wizard].

6 Select [Receiver].

- Select [OK] and press <SET> to go to the next screen. The receiver cameras are now ready, with the following screen displayed.

- When using multiple receiver cameras, set up all receiver cameras to receiver state.
- Once the settings are complete, receivers cannot be added. You must repeat the setup process from step 1.

Preparing the Sender Camera

Set up the sender camera by operating the camera to use as the sender.

7 Select [Sender].

- Perform steps 1 to 5 on page 72 for the sender camera, then select **[Sender]**.
- Select **[OK]** and press **< (SET) >** to go to the next screen.

8 Select [Auto connect].

- Select **[OK]** and press **< (SET) >** to go to the next screen.
- To set manually, see page 79.

Connecting the Cameras

Operate the receiver cameras and sender camera to connect them.

9 On the receiver cameras, select [OK].

- On all receiver cameras, select **[OK]**.
- ▶ On the sender camera's LCD monitor, the number of receiver cameras detected is displayed.

10 On the sender camera, select [OK].

- Check the number of receiver cameras, then select **[OK]**.

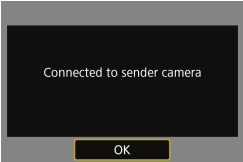

11 On all cameras, select [OK].

- On the sender camera and all receiver cameras, select **[OK]**.
- Settings information is stored in the camera. It is not stored in the transmitter.

Connected to receiver camera

OK

Connected to sender camera

OK

Positioning the Cameras

Receiver camera

Receiver camera

Receiver camera

Receiver camera

Sender camera

- Set the Live View shooting/Movie shooting switch to .
- Position the receiver cameras in clear view of the sender camera, without objects between them.
- Receiver cameras can be positioned up to approx. 100 m / 328 ft. from the sender camera. However, the distance supported for linked shooting may be shorter depending on the wireless communication conditions, which are affected by how the cameras are positioned, the environment of use, and weather conditions.
- Pressing the shutter button halfway on the sender camera will also put the receiver cameras in the state corresponding to when their shutter buttons are pressed halfway. Similarly, fully pressing the shutter button on the sender camera will also put the receiver cameras in the state corresponding to when their shutter buttons are fully pressed.
- There will be a slight delay after the sender camera shutter is released before the receiver camera shutters are released. (Simultaneous shooting is not possible.)

- Do not use multiple flash units. Although slight, there is a difference in the shutter release timing which may cause out-of-sync flash firing and inadequate exposure.
- Linked shooting is not possible when sender and receiver cameras are set to **[Mirror lockup] [Enable]** or **[Enable:Mirror down w/ SET]**.

- During linked shooting, when you press the AE lock or depth-of-field preview button, the camera adjusts the focus and meters as if you had pressed the shutter button halfway.
- Once you have established a connection between the sender camera and receiver cameras, the settings are retained even after you replace the batteries.
- If you will no longer use a receiver camera in linked shooting, set **[Communication mode]** to **[Disconnect]** on that receiver camera.
- Any cameras compatible with linked shooting, when they have WFT series transmitters attached, can be used as receiver cameras, regardless of model.

Using the Transmitter with WFT Server

Using WFT Server, you can shoot remotely with a sender camera linked to receiver cameras set to shoot at the same time. WFT Server can also be used to access the sender camera or receiver cameras for Live View display, and you can adjust the focus and configure remote shooting settings as needed.

- Additionally, images on camera cards can be viewed and downloaded.
- **Wireless LAN functions and operating system of the computer must support ad hoc mode.**

Linked Shooting

Receiver camera

Receiver camera

Receiver camera

Receiver camera

Sender camera

WFT Server

Connecting the Sender and Receiver Cameras

1 Set up the receiver cameras.

- Perform steps 1 to 6 on page 72 for the cameras to use as receivers. When the next screen is displayed, the receiver cameras are ready.

2 Set up the sender camera.

- Perform steps 1 to 5 on page 72 for the camera to use as the sender, then select **[Sender]**.
- Select **[OK]** and press **<SET>** to go to the next screen.

3 Select **[Manual connect]**.

- Select **[OK]** and press **<SET>** to go to the next screen.

4 Select connection method.

- Select the wireless LAN ad hoc mode supported by the computer.
- Select **[OK]** and press **<SET>** to go to the next screen.

5 Specify the channel.

- When selecting **[Manual setting]**, specify the same channel on the sender camera, receiver cameras, and computer.
- Select **[OK]** and press **<SET>** to go to the next screen.

6 Enter the encryption key.

- Enter a 5-digit encryption key (password) and press the <MENU> button.
- Set the key entered here on the computer in order to connect to the sender camera from the computer.

7 On the receiver cameras, select [OK].

- On all receiver cameras, select [OK].
- ▶ On the sender camera's LCD monitor, the number of receiver cameras detected is displayed.

8 On the sender camera, select [OK].

- Check the number of receiver cameras, then select [OK].

9 On all cameras, select [OK].

- On the sender camera and all receiver cameras, select [OK].
- Settings information is stored in the camera. It is not stored in the transmitter.

Checking the Camera's IP Address and SSID

You will need the camera's IP address and SSID, displayed in step 6, to connect to the camera from a computer.

1 Select [Communication settings].

- Under the [4] tab, select [Communication settings], then press <SET>.

2 Select [WFT settings].

3 Select [Connection settings].

4 Select [LinkedShot].

- Turn the <DIAL> dial to select [LinkedShot] at the bottom.

5 Select [Confirm settings].

- ▶ The settings are displayed.

6 Check the settings.

- Turn the <⌚> dial to display other screens.
- Write down the IP address and SSID.
- The SSID is the same for all the cameras.
- After checking the settings, press the <MENU> button to exit the confirmation dialog.

- Check settings on the sender camera and all receiver cameras in the same way.

IP Addresses Assigned to Computers

IP addresses assigned to cameras end in 1 - 11, as in 192.168.1.1 - 192.168.1.11.

For this reason, assign computer IP addresses that end in a number higher than 11, as in 192.168.1.12.

Connecting the Cameras and the Computer

To connect the cameras and the computer, use the computer's wireless LAN device search function.

- For information about the wireless LAN device search function, refer to the computer instruction manual.
- **Wireless LAN functions and operating system of the computer must support ad hoc mode.**
- Set up a WFT account on the [Function settings] screen (p.104) in advance.

1 From the computer, find cameras on the network.

- Use the computer's wireless LAN device search function.

2 Connect to a camera.

- Select a device with the same ID as the SSID you wrote down in step 6 on page 82.
- In the password field, enter the encryption key set in step 6 on page 80.
- ▶ The computer is now connected to the camera.

3 Display WFT Server.

- For the operation procedure, see page 58.
- In the address field, enter the IP address you wrote down in step 6 on page 59.
- To connect to a different camera, change the IP address in the address field.
- Log in by entering the WFT account, [Login name] (user name) and [Password] specified, in advance.

Making Images Viewable and Shooting Remotely

- For how to use WFT Server, see page 55.
- To switch cameras, enter the IP address of the sender or receiver camera in the web browser.
- When shooting remotely with linked shooting, connect to the sender camera. If you connect to a receiver camera, only that receiver camera will shoot, without linked shooting.
- You can connect to receiver cameras, adjust the focus and configure shooting functions, and then connect to the sender camera for linked shooting.

6

Synchronizing the Camera Time

Set the sender camera time on up to 10 receiver cameras, as needed. Synchronization can be done over a wireless or wired LAN connection. Note that even after synchronization, there will be a margin of error between sender and receiver camera times.

Preparing for Time Synchronization

Wireless LAN

Set up multiple cameras with the WFT-E7 series transmitters attached.

Sender camera

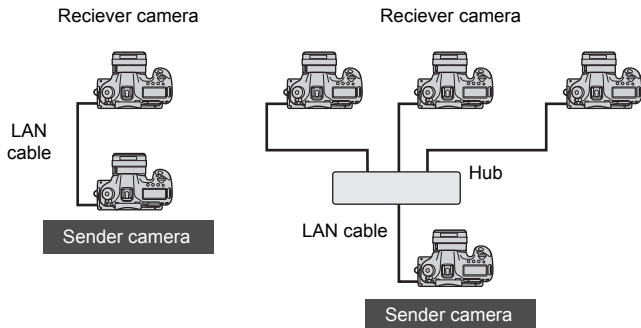

Receiver camera

Receiver camera

Wired LAN

Use a LAN cable to connect cameras with the WFT-E7 series transmitters attached. When there are multiple receiver cameras, connect them to a hub with LAN cables, and connect the hub to the sender camera with LAN cables.

Synchronizing the Time

Steps 1 to 5 are the same on the sender and receiver cameras.

1 Select [Communication settings].

- Under the [4] tab, select [Communication settings], then press < (SET) >.

2 Select [WFT settings].

3 Select [Sync time between cameras].

- If connected to another device, [Set [Connection settings] to [Disconnect]] will appear. Select [OK] to terminate the connection.

4 Select [OK].

Synchronize the camera time between the same camera models.

If the camera models of the sender camera and receiver cameras are different, synchronizing the time with receiver cameras is not possible.

5 Select the LAN type.

- Select [OK] and press <SET> to go to the next screen.

6 Set up the sender camera.

- Select [Sender], then press <SET>.
- Select [OK] and press <SET> to go to the next screen.
- ▶ When the next screen is displayed, the sender camera is ready. Go to step 7 to set up the receiver cameras.

7 Set up the receiver cameras.

- After configuring the receiver camera settings following steps 1 to 5 on the preceding page, select [Receiver].
- Select [OK] and press <SET> to go to the next screen.
- ▶ Select [OK] on the displayed screen.
- To set the time on multiple receiver cameras, follow these steps on all receiver cameras.
- ▶ On the sender camera's LCD monitor, the number of receiver cameras detected is displayed.

8 On the sender camera, select [OK].

- Check the number of receiver cameras, then select [OK].
- ▶ The time on receiver cameras is synchronized to the sender camera time.

- Select [OK] to return to the [WFT settings] screen.

[illegible]

7

Terminating the Connection and Reconnecting

Terminating the Connection

1 Select [Communication settings].

- Under the [4] tab, select [Communication settings], then press <SET>.

2 Select [WFT settings].

3 Select [Connection settings].

4 Select [Disconnect].

- ▶ The connection is terminated.

Reconnecting

1 Select [Communication settings].

- Under the [Y4] tab, select [Communication settings], then press <SET>.

2 Select [WFT settings].

3 Select [Connection settings].

4 Select [SET*].

- From the saved settings, select the setting to connect to.

5 Select [Connect].

- The connection is re-established.
- If settings have been changed on the target device, configure the settings again to connect to the camera.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

8

Checking and Operating Connection Settings

Displaying the Connection Settings Screen

Check, change, or delete connection settings saved on the camera.

1 Select [Communication settings].

- Under the [4] tab, select [Communication settings], then press <SET>.

2 Select [WFT settings].

3 Select [Connection settings].

4 Select [SET*].

- From the saved settings, select the setting to check.

5 Check or change the settings.

- Select an item and press <SET>, then check or change the settings on the displayed screen.

[Connect] (p.93)

Select this to re-establish a connection. Select **[OK]** on the confirmation dialog and press <SET> to establish a connection.

[Connection wizard]

Set up a connection using the connection wizard. Follow the procedures displayed to complete the connection settings. If settings are already saved, they will be overwritten.

[Change] (p.98)

Change connection settings saved on the camera.

[Save/load settings on card] (p.102, 103)

Save connection settings saved on the camera to a card, or load connection settings saved on a card into the camera.

[Delete settings]

Delete connection settings saved on the camera. Select **[OK]** on the confirmation dialog to delete the setting.

[Confirm settings]

Check connection settings saved on the camera. When you select **[Confirm settings]**, the settings will be displayed.

Changing Settings

Settings originally completed using the connection wizard can be changed. You can also configure settings that cannot be set using the connection wizard, such as when an image with the same file name as an existing file is sent to the FTP server.

1 Select [Change].

- On the **[Connection settings]** screen displayed in step 5 on page 97, select **[Change]**.

2 Select the item to change.

- Select the item and press **< (SET) >**. A setting screen will appear.

[Settings name]

You can name the settings. Select **[Settings name]**, then enter characters using the virtual keyboard (p.29).

[TCP/IP]

Configure network settings such as IP address settings and security settings.

[FTP server]

Target server	
Login password	
Target folder	
Directory structure	Camera
Overwrite same file	Enable
Passive mode	Disable
Proxy server	

MENU 

This is displayed for settings that connect to an FTP server. Configure FTP server settings.

IP Security (IPsec)

Configured in **[TCP/IP]** → **[Security]**.

IPsec is a set of standards for encrypted communication over the Internet. It provides effective security for both wireless and wired LANs. To use this function, you must enable IPsec in the network settings of the computer. When IPsec for the transmitter is employed, only transport mode is supported, and 3DES or AES encryption and SHA-1 authentication are used. Note that the IP address of the computer for communication with the transmitter must be entered in **[Destination address]** on the settings screen.

Directory Structure of the Target Folder

Configured in **[FTP server]** → **[Directory structure]**.

Selecting **[Camera]** automatically creates a folder structure matching that of the camera's (such as A/DCIM/100EOS5D) in the target root folder for image storage. If you have created a subfolder in the root folder by changing the **[Target folder]** setting, a folder structure such as "A/DCIM/100EOS5D" is automatically created in that folder for image storage.

Selecting **[Default]** will use the target root folder for image storage. If you have created a subfolder in the root folder by changing the **[Target folder]** setting, images are saved in that folder.

Overwriting Files of the Same Name

Configured in **[FTP server]** → **[Overwrite same file]**.

When **[Overwrite same file]** is set to **[Disable]**

If there is already a file of the same name in the target folder on the FTP server, the new file is saved with an extension consisting of an underscore and a number, as in IMG_0003_1.JPG.

When you resend images if initial transfer fails

Even if the transmitter is configured to overwrite files of the same name, if you resend an image file that could not be transferred initially, the existing file may not be overwritten in some cases. If this happens, the new file is saved with an extension consisting of an underscore, a letter, and a number, as in IMG_0003_a1.JPG.

Passive Mode

Configured in **[FTP server]** → **[Passive mode]**.

Enable this setting in network environments protected by a firewall. If an Error 41 occurs ("Cannot connect to FTP server"), setting passive mode to **[Enable]** may enable access to the FTP server.

Saving and Loading Settings

Connection settings can be saved on a card for use with other cameras. In addition, connection settings configured on other cameras can be applied to the camera to be used.

Saving Settings

1 Select [Save/load settings on card].

- On the [Connection settings] screen displayed in step 5 on page 97, select [Save/load settings on card].

2 Select [Save settings to card].

3 Select [OK].

- The file name is determined automatically by the camera: WFTNPF, followed by a number (01 to 10) and the extension NIF. You can rename the file as desired by pressing the [INFO] button.
- ▶ The settings are saved on the card.
- The settings are saved as a file in the area of the card shown when the card is opened (in the root directory).

ⓘ Only ten settings files can be saved on one card from the camera. To save more than ten, use another card.

Loading Settings

1 Select [Save/load settings on card].

- On the [Connection settings] screen displayed in step 5 on page 97, select [Save/load settings on card].

2 Select [Load settings from card].

3 Select the settings file.

- Select a settings file that matches your network environment.

4 Select [OK].

- Information from the settings file is loaded into the selected settings number.

Even if a computer or other device is used to save more than ten settings files on one card, only ten will be displayed on the camera's load settings screen. To load eleven or more settings files, first load up to ten setting files, then load the remaining files from a card that does not contain already loaded setting files.

Function Settings Screen

On the [Function settings] screen, you can configure settings for FTP transfer and the WFT Server, set the power saving function, and check the MAC address.

Displaying the Function Settings Screen

1 Select [Communication settings].

- Under the [⚡4] tab, select [Communication settings], then press <ⓈⓈⓈ>.

2 Select [WFT settings].

3 Select [Function settings].

- The [Function settings] screen is displayed.

[WFT server settings]

Configure WFT Server settings. You can set the WFT account and port number.

- For instructions on setting the WFT account, see page 56.
- Note that there is normally no need to change the port number (80).

[Power saving]

● FTP Transfer

When [**Enable**] is set, if no image is transferred for a certain period of time, the transmitter will log off from the FTP server and stop the LAN. When the transmitter is ready for image transfer, the connection is re-established automatically.

● EOS Utility/WFT server

If no communication is established for a certain period of time, the transmission rate drops to save power. The power saving function is enabled regardless of the setting.

● Linked Shooting

The power saving function is disabled regardless of the setting.

[MAC address]

The MAC address of the transmitter can be checked.

[illegible]

9

Troubleshooting Guide

Transfer speed in ad hoc mode may become extremely slow when the transmitter is used with certain types of computer. For more information, contact your dealer or nearest Canon Service Center.

Responding to Error Messages

If transmitter errors are displayed on the camera LCD monitor, refer to the examples of corrective actions in this section to eliminate the cause of the error. When an error has occurred, the <LAN> lamp on the transmitter blinks and the error code number is shown on the LCD panel. The error details can also be checked in the menu, **[WFT settings] → [Error description]**.

Click the error code number in the following table to jump to the corresponding page.

11 (p.109)	12 (p.109)			
21 (p.110)	22 (p.111)	23 (p.112)	24 (p.112)	
41 (p.114)	42 (p.116)	43 (p.116)	44 (p.116)	45 (p.117)
46 (p.118)	47 (p.118)			
61 (p.119)	62 (p.119)	63 (p.120)	64 (p.120)	65 (p.121)
66 (p.121)	67 (p.122)	68 (p.122)	69 (p.122)	
71 (p.123)	72 (p.123)	73 (p.123)		
81 (p.123)	82 (p.124)			
91 (p.124)				

When the error below is displayed

When “ERROR 01” is displayed on the transmitter LCD panel, firmly reconnect the transmitter and the camera with the interface cable.

- * This error is not displayed on the camera LCD monitor.
- * This error is also displayed when the transmitter is connected to a camera not compatible with the transmitter.

If [Waiting to retry transfer...] is displayed

If image transfer via FTP fails after shooting, the screen on the left is displayed. Also, an error code number is displayed on the transmitter's LCD panel, and the <LAN> lamp blinks in red. Check the error code number and eliminate the cause of the error.

Once the cause of the error is eliminated, the images whose transfer previously failed will be transferred automatically.

Note that if you cancel image transfer or turn off the camera, auto retry is not performed. Follow the steps on page 44 to transfer the images.

11: Connection target not found

- **In the case of [EOSUtility], is EOS Utility running?**
 - ▶ Start EOS Utility and re-establish the connection (p.52).
- **Are the transmitter and the access point set to use the same encryption key for authentication?**
 - ▶ This error occurs if the encryption keys do not match when the authentication method for encryption is set to [**Open system**]. The setting is case-sensitive, so check upper- and lower-case characters. Make sure that the correct encryption key for authentication is entered on the transmitter (p.28).

12: Connection target not found

- **Are the target device and access point turned on?**
 - ▶ Turn on the target device and access point, then wait a while. If a connection still cannot be established, perform the procedures to establish the connection again.

21: No address assigned by DHCP server

What to check on the transmitter

- **On the transmitter, IP address is set to [Auto setting]. Is this the correct setting?**
 - ▶ If no DHCP server is used, configure settings after setting the IP address to **[Manual setting]** on the transmitter (p.132).

What to check on the DHCP server

- **Is the power of the DHCP server on?**
 - ▶ Turn on the DHCP server.
- **Are there enough addresses for assignment by the DHCP server?**
 - ▶ Increase the number of addresses assigned by the DHCP server.
 - ▶ Remove devices assigned addresses by the DHCP server from the network to reduce the number of addresses in use.
- **Is the DHCP server working correctly?**
 - ▶ Check the DHCP server settings to make sure it is working correctly as a DHCP server.
 - ▶ If applicable, ask your network administrator to ensure the DHCP server is available.

What to check on the network as a whole

- **Does your network include a router or similar device that serves as a gateway?**
 - ▶ If applicable, ask your network administrator for the network gateway address and enter it on the transmitter (p.128, 132).
 - ▶ Make sure that the gateway address setting is correctly entered on all network devices, including the transmitter.

Responding to Error Messages 21 - 24

Also check the following points when responding to errors numbered 21 - 24.

Are the transmitter and the access point set to use the same encryption key for authentication?

- ▶ This error occurs if the encryption keys do not match when the authentication method for encryption is set to **[Open system]**. The setting is case-sensitive, so check upper- and lower-case characters. Make sure that the correct encryption key for authentication is entered on the transmitter (p.28).

22: No response from DNS server

What to check on the transmitter

- **On the transmitter, DNS address is set to [Manual setting]. Is this the correct setting?**
 - ▶ If no DNS server is used, set the transmitter's DNS address setting to [Disable] (p.132).
- **On the transmitter, does the DNS server's IP address setting match the server's actual address?**
 - ▶ On the transmitter, set the IP address that matches the address of the DNS server used (p.128, 132).

What to check on the DNS server

- **Is the power of the DNS server on?**
 - ▶ Turn on the DNS server.
- **Are the DNS server settings for IP addresses and the corresponding names correct?**
 - ▶ On the DNS server, make sure IP addresses and the corresponding names are entered correctly.
- **Is the DNS server working correctly?**
 - ▶ Check the DNS server settings to make sure the server is working correctly as a DNS server.
 - ▶ If applicable, ask your network administrator to ensure that the DNS server is available.

What to check on the network as a whole

- **Does your network include a router or similar device that serves as a gateway?**
 - ▶ If applicable, ask your network administrator for the network gateway address and enter it on the transmitter (p.128, 132).
 - ▶ Make sure that the gateway address setting is correctly entered on all network devices, including the transmitter.

23: Device with same IP address exists on selected network

What to check on the transmitter

- **Is another device on the transmitter network using the same IP address as the transmitter?**
- ▶ Change the transmitter's IP address to avoid using the same address as another device on the network. Otherwise, change the IP address of the device that has a duplicate address.
- ▶ If the transmitter's IP address is set to **[Manual setting]** in network environments using a DHCP server, change the setting to **[Auto setting]** (p.30).

24: No response from proxy server

What to check on the transmitter

- **The transmitter's proxy server setting is [Enable]. Is this the correct setting?**
- ▶ If no proxy server is used, set the proxy server setting to **[Disable]** (p.35).
- **Do the transmitter's [Address setting] and [Port No.] settings match those of the proxy server?**
- ▶ Configure the transmitter's proxy server address and port number to match those of the proxy server (p.35).
- **Are the transmitter's proxy server settings correctly entered on the DNS server?**
- ▶ Make sure the proxy server's **[Address]** is correctly entered on the DNS server.

What to check on the proxy server

- **Is the power of the proxy server on?**
 - ▶ Turn on the proxy server.
- **Is the proxy server working correctly?**
 - ▶ Check the proxy server settings to make sure it is working correctly as a proxy server.
 - ▶ If applicable, ask your network administrator for the proxy server's address setting and port number, then enter them on the transmitter.

What to check on the network as a whole

- **Does your network include a router or similar device that serves as a gateway?**
 - ▶ If applicable, ask your network administrator for the network gateway address and enter it on the transmitter.
 - ▶ Make sure that the gateway address setting is correctly entered on all network devices, including the transmitter.

41: Cannot connect to FTP server

What to check on the transmitter

- **On the transmitter, does the FTP server's IP address setting match the server's actual address?**
 - ▶ Configure the IP address on the transmitter to match the actual FTP server address (p.34).
- **Are the transmitter and the access point set to use the same encryption key for authentication?**
 - ▶ This error occurs if the encryption keys do not match when the authentication method for encryption is set to **[Open system]**. The setting is case-sensitive, so check upper- and lower-case characters. Make sure that the correct encryption key for authentication is entered on the transmitter (p.28).
- **On the transmitter, does the [Port number setting] for the FTP server match the actual port number of the FTP server?**
 - ▶ Configure the same port number (usually 21) on the transmitter and FTP server. Configure the port number on the transmitter to match the actual FTP server port number (p.35).
- **Are the transmitter's FTP server settings correctly entered on the DNS server?**
 - ▶ Make sure the FTP server's **[Server name]** is correctly entered on the DNS server. Make sure the **[Server name]** for the FTP server is correctly entered on the transmitter (p.34).

What to check on the FTP server

- **Is the FTP server working correctly?**
 - ▶ Configure the computer correctly to function as an FTP server.
 - ▶ If applicable, ask your network administrator for the FTP server address and port number, then enter them on the transmitter.
- **Is the power of the FTP server on?**
 - ▶ Turn on the FTP server. The server may have been turned off because of an energy-saving mode.
- **On the transmitter, does the FTP server's IP address setting (in [Address]) match the server's actual address?**
 - ▶ Configure the IP address on the transmitter to match the actual FTP server address (p.34).
- **Is a firewall or other security software enabled?**
 - ▶ Some security software uses a firewall to restrict access to the FTP server. Change the firewall settings to allow access to the FTP server.
 - ▶ You may be able to access the FTP server by setting [**Passive mode**] to [**Enable**] on the transmitter (p.101).
- **Are you connecting to the FTP server via a broadband router?**
 - ▶ Some broadband routers use a firewall to restrict access to the FTP server. Change the firewall settings to allow access to the FTP server.
 - ▶ You may be able to access the FTP server by setting [**Passive mode**] to [**Enable**] on the transmitter (p.101).

What to check on the network as a whole

- **Does your network include a router or similar device that serves as a gateway?**
- ▶ If applicable, ask your network administrator for the network gateway address and enter it on the transmitter (p.128, 132).
- ▶ Make sure that the gateway address setting is correctly entered on all network devices, including the transmitter.

42: FTP server rejected connection

What to check on the FTP server

- **Is the FTP server configured to restrict access to only some IP addresses?**
- ▶ Check the transmitter's IP address in **[Confirm settings]** (p.97), then change the FTP server settings.

43: Cannot connect to FTP server. Error code received from server.

What to check on the FTP server

- **Have you exceeded the maximum number of FTP server connections?**
- ▶ Disconnect some network devices from the FTP server or increase the maximum number of connections in the FTP server settings.

44: Cannot disconnect FTP server. Error code received from server.

- **This error occurs if the transmitter fails to disconnect from the FTP server for some reason.**
- ▶ Turn off and on the FTP server and camera.

45: Cannot login to FTP server. Error code received from server.

What to check on the transmitter

- **On the transmitter, is the [Login name] entered correctly?**
 - ▶ Check the login name for accessing the FTP server. The setting is case-sensitive, so check upper- and lower-case characters. Make sure the correct login name is entered on the transmitter (p.35).
- **On the transmitter, is the [Login password] entered correctly?**
 - ▶ If a login password is configured on the FTP server, check the upper- and lower-case characters to make sure the password on the transmitter matches it (p.35).

What to check on the FTP server

- **Do the user rights for the FTP server allow reading, writing, and log access?**
 - ▶ Configure the FTP server's user rights to allow reading, writing, and log access.
- **Is the folder specified as the transfer destination on the FTP server named with ASCII characters?**
 - ▶ Use ASCII characters for the folder name.

46: For the data session, error code received from FTP server

What to check on the FTP server

- **The connection was terminated by the FTP server.**
 - ▶ Restart the FTP server.
- **Do the user rights for the FTP server allow reading, writing, and log access?**
 - ▶ Configure the FTP server's user rights to allow reading, writing, and log access.
- **Do user rights allow access to the target folder on the FTP server?**
 - ▶ Configure the user rights for access to the target folder on the FTP server to allow saving images from the transmitter.
- **Is the power of the FTP server on?**
 - ▶ Turn on the FTP server. The server may have been turned off because of an energy-saving mode.
- **Is the hard disk of the FTP server full?**
 - ▶ Increase available space on the hard disk.

47: Image file transfer completion not confirmed by FTP server

- **This error occurs if, for some reason, the transmitter fails to receive confirmation from the FTP server that image file transfer is complete.**
 - ▶ Turn off and on the FTP server and camera, then transfer the images again.

61: Selected SSID wireless LAN network not found

- **Are any obstacles blocking the line of sight between the transmitter and the antenna of the access point?**
- ▶ Move the antenna of the access point to a position clearly visible from the point of view of the transmitter.

What to check on the transmitter

- **Does the SSID set on the transmitter match that of the access point?**
- ▶ Check the SSID at the access point, then set the same SSID on the transmitter (p.27).

What to check at the access point

- **Is the access point turned on?**
- ▶ Turn on the power of the access point.
- **If filtering by MAC address is active, is the MAC address of the transmitter used registered at the access point?**
- ▶ Register the MAC address (p.105) of the transmitter used at the access point.

62: No response from wireless LAN terminal

What to check on the transmitter

- **Is the transmitter configured for communication in infrastructure mode?**
- ▶ Configure the transmitter for communication in ad hoc mode.

What to check at the access point

- **Is there a nearby access point for ad hoc communication?**
- ▶ Set up an access point for ad hoc communication near the transmitter.

63: Wireless LAN authentication failed

- **Are the transmitter and the access point set to use the same authentication method?**
 - ▶ The transmitter supports the following authentication methods: [Open system], [Shared key], and [WPA/WPA2-PSK] (p.23).
- **Are the transmitter and the access point set to use the same encryption key for authentication?**
 - ▶ The setting is case-sensitive, so check upper- and lower-case characters. Make sure that the correct encryption key for authentication is entered on the transmitter (p.28).
- **If filtering by MAC address is active, is the MAC address of the transmitter used registered at the access point?**
 - ▶ Register the MAC address (p.105) of the transmitter at the access point. The MAC address can be checked on the [Function settings] screen (p.104).

64: Cannot connect to wireless LAN terminal

- **Are the transmitter and the access point set to use the same encryption method?**
 - ▶ The transmitter supports the following encryption methods: WEP, TKIP, and AES (p.23).
- **If filtering by MAC address is active, is the MAC address of the transmitter used registered at the access point?**
 - ▶ Register the MAC address (p.105) of the transmitter used at the access point. The MAC address can be checked on the [Function settings] screen (p.104).

65: Wireless LAN connection lost

- **Are any obstacles blocking the line of sight between the transmitter and the antenna of the access point?**
- ▶ Move the antenna of the access point to a position clearly visible from the point of view of the transmitter.
- **The wireless LAN connection was lost, for some reason, and the connection cannot be restored.**
- ▶ The following are possible reasons: excessive access to the access point from other terminals, a microwave oven or similar appliance in use nearby (interfering with IEEE 802.11n/g/b (2.4 GHz band)), or influence of rain or high humidity.

66: Incorrect wireless LAN encryption key

- **Are the transmitter and the access point set to use the same encryption key for authentication?**
- ▶ The setting is case-sensitive, so check upper- and lower-case characters. Make sure that the correct encryption key for authentication is entered on the transmitter and the access point (p.28).

Note that if the authentication method is **[Open system]**, an Error 41 ("Cannot connect to FTP server") is displayed.

67: Incorrect wireless LAN encryption method

- **Are the transmitter and the access point set to use the same encryption method?**
 - ▶ The transmitter supports the following encryption methods: WEP, TKIP, and AES (p.23).
- **If filtering by MAC address is active, is the MAC address of the transmitter used registered at the access point?**
 - ▶ Register the MAC address (p.105) of the transmitter used at the access point. The MAC address can be checked on the [Function settings] screen (p.104).

68: Cannot connect to wireless LAN terminal. Retry from the beginning.

- **Did you hold down the access point's WPS (Wi-Fi Protected Setup) button for the specified period of time?**
 - ▶ Hold down the WPS button for the period of time instructed by the access point's instruction manual.
- **Are you trying to establish a connection near the access point?**
 - ▶ Try establishing the connection when both devices are within reach of each other.

69: Multiple wireless LAN terminals have been found. Cannot connect. Retry from the beginning.

- **Connection is in progress by other access points in Pushbutton Connection mode (PBC mode) of Wi-Fi Protected Setup (WPS).**
 - ▶ Wait a while before trying to establish the connection, or try to establish a connection in PIN code connection mode (PIN mode) (p.25).

71: Cannot connect to receiver camera

- **Are you following the correct procedure to establish the connection with receiver cameras?**
 - ▶ Operate receiver cameras by following the correct instructions (p.72, 73).
- **Are the receiver cameras too far from the sender camera?**
 - ▶ Bring the receiver cameras closer to the sender camera.

72: Cannot connect to sender camera

- **Are you following the correct procedure to establish the connection with sender camera?**
 - ▶ Operate the sender camera by following the correct instructions (p.74, 75).
- **Is the sender camera too far from the receiver cameras?**
 - ▶ Bring the sender camera closer to the receiver cameras.

73: Could not synchronize the time

- **Are you following the correct procedure to establish a connection between the sender and receiver cameras?**
 - ▶ Operate the sender and receiver cameras by following the correct instructions (p.87-89).
- **Is the sender camera too far from the receiver cameras?**
 - ▶ Bring the sender and receiver cameras closer together.

81: Wired LAN connection lost

- **Is the LAN cable securely connected?**
 - ▶ Reconnect the LAN cable between the transmitter and server. Because the cable may be severed, try using another cable to connect the devices.
- **Is the hub or router on?**
 - ▶ Turn on the hub or router.
- **Is the server on?**
 - ▶ Turn the server on. The server may have been turned off because of an energy-saving mode.

82: Wireless File Transmitter not connected

- **Is the transmitter attached correctly?**
- ▶ Make sure the transmitter is attached to the camera correctly (p.15).

91: Other error

- **A problem other than error code number 11 to 82 occurred.**
- ▶ Turn off and on the camera's power switch.

Wireless Function Notes

If the transmission rate drops, the connection is lost, images are not displayed smoothly, or other problems occur when using the wireless functions, try the following corrective actions.

Access Point and Antenna Installation Location

- When using the transmitter indoors, install the device in the same room where you are shooting.
- Install the device where people or objects do not come between it and the transmitter.

Nearby Electronic Devices

If the transmission rate of a wireless LAN drops because of the influence of the following electronic devices, stop using them or move further away from the devices to transmit communication. In addition, switching to a wired LAN can resolve the problem.

- When the transmitter is communicating over a wireless LAN via IEEE 802.11b/g/n using radio waves in the 2.4 GHz band, the wireless LAN transmission rate may drop if there are Bluetooth devices, microwave ovens, cordless telephones, microphones, smartphones, or similar devices operating on the same frequency band nearby.

Notes for Using Multiple Wireless Transmitters

- When multiple cameras with a wireless transmitter attached are connected to one access point, make sure that the cameras' IP addresses are different.
- When multiple cameras with a wireless transmitter attached are connected to one access point, the transmission rate drops.
- When there are multiple IEEE 802.11n/g/b (2.4 GHz band) access points, leave a gap of four channels between each wireless LAN channel to reduce radio wave interference. For example, use channels 1, 6, and 11, channels 2, 7, and 12, or channels 3, 8, and 13.

When IEEE 802.11n/a can be used (on the 5 GHz band), switch to IEEE 802.11n/a (on the 5 GHz band) and specify a different channel.

Security

If security settings have not been properly set, the following problems may occur.

- **Transmission monitoring**
Third parties with malicious intent may monitor the wireless LAN transmissions and attempt to acquire the data you are sending.
- **Unauthorized network access**
Third parties with malicious intent may gain unauthorized access to the network you are using to steal, modify, or destroy information. Additionally, you could fall victim to other types of unauthorized access such as impersonation (where someone assumes an identity to gain access to unauthorized information) or springboard attacks (where someone gains unauthorized access to your network as a springboard to cover their tracks when infiltrating other systems).

It is recommended to thoroughly secure your network to prevent these types of problems from occurring.

Checking Network Settings

- **Windows**

Open the Windows **[Command Prompt]**, then type `ipconfig /all` and press the **<Enter>** key.

The IP address assigned to the computer is displayed, as well as the subnet mask, gateway, and DNS server information.

- **Mac OS**

In Mac OS X, open the **[Terminal]** application, enter `ifconfig -a`, and press the **<Return>** key. The IP address assigned to the computer is indicated in the **[en0]** item by **[inet]**, in the format `“***.***.***.***”`.

* For information about the **[Terminal]** application, refer to the Mac OS X help.

To avoid using the same IP address for the computer and other devices on the network, change the rightmost number when configuring the IP address assigned to the camera in the processes described on page 132.

Example: 192.168.1(10)

10

Reference

Creating and Registering Captions

Follow these steps to create captions and register them on the camera, as introduced in “Transferring Images with a Caption” (p.48). When creating and registering captions, use a computer on which EOS Utility is installed.

See “Operating Remotely Using EOS Utility” on page 51 to enable the use of EOS Utility over a LAN.

1 Start EOS Utility and select [Camera settings].

- ▶ The camera settings screen is displayed.

2 Select [WFT Captions].

- ▶ The screen for caption creation is displayed.

WFT Captions

Register text to use with
[Transfer with caption] feature.

1 Canon

2 1

3 2

4 3

3 Enter the caption or captions.

- Enter up to 31 characters (in ASCII format).
- To acquire caption data stored in the camera, select [**Load settings**].

12 11

13 12

14 13

15 14

Load settings Apply to camera Close

4 Register the captions on the camera.

- Select [**Apply to camera**] to register your new captions on the camera.

Setting IP Address Manually

Set the IP address settings manually. The items displayed will differ depending on the communication method.

1 Select [Manual setting].

- Select **[OK]** and press **<SET>** to go to the next screen.

2 Select the item to be set.

- Select an item and press **<SET>**. The number entry screen will appear.
- To use a gateway, DNS address, or IPsec, select **[Enable]**, select **[Address]**, then press **<SET>**.

3 Enter the desired values.

- Turn the **<Gears>** dial to move the input position in the upper area and turn the **<Dial>** dial to select the number. Press **<SET>** to enter the selected number.
- To set the entered values and return to the screen for step 2, press the **<MENU>** button.

IP address set.

IP address	192.168.1.3
Subnet mask	255.255.255.0
Gateway	Disable
DNS address	162.168.11.1
IP security	Disable

Cancel OK

4 Select [OK].

- When you have completed setting the necessary items, select [OK] and press <  >.
- ▶ The setting screen for the communication method will appear.
- If you are not sure what to enter, see “Checking Network Settings” (p.128), or ask the network administrator or another person knowledgeable about the network.

Using a Bracket (Sold Separately)

Attaching the optional Accessory Bracket AB-E1 enables you to use the transmitter and a battery grip at the same time.

Attach the transmitter and camera to the bracket as shown.

Tripod socket

Specifications

■ Type

Type:

Wired and wireless LAN (IEEE 802.11a/b/g/n) IPsec-compatible image transfer accessory with Bluetooth connectivity for GPS devices

* Bluetooth connectivity is not supported on the EOS 5D Mark IV.

■ Wireless LAN

Standards compliance:

IEEE 802.11a

IEEE 802.11b

IEEE 802.11g

IEEE 802.11n

Transmission method:

DS-SS modulation (IEEE 802.11b)

OFDM modulation (IEEE 802.11a/g/n)

Transmission range:

Approx. 150 m / 492 ft.

* With no obstructions between the transmitting and receiving antennas, and no radio interference

* With a large, high-performance antenna attached to the wireless LAN access point

Transmission frequency (central frequency):

Version	Frequency	Channels
WFT-E7A (Ver.2)	2412–2462 MHz	1–11
	5180–5320 MHz	36–64
	5745–5825 MHz	149–165
WFT-E7B (Ver.2)	2412–2472 MHz	1–13
	5180–5320 MHz	36–64
	5500–5700 MHz	100–140
WFT-E7C (Ver.2)	2412–2472 MHz	1–13
	5745–5805 MHz	149–161
WFT-E7D (Ver.2)	2412–2462 MHz	1–11
	5280–5320 MHz	56–64
	5500–5700 MHz	100–140
WFT-E7E (Ver.2)	2412–2472 MHz	1–13
	5180–5320 MHz	36–64
	5500–5700 MHz	100–140
	5745–5825 MHz	149–165

Connection method:	Infrastructure or ad hoc mode * Wi-Fi Protected Setup supported
Security:	Authentication method: Open system, Shared key, WPA/WPA2-PSK Encryption: WEP, TKIP, and AES

■Wired LAN

Ethernet:	10BASE-T, 100BASE-TX and 1000BASE-T
-----------	-------------------------------------

■LAN Functions

FTP transfer:	Automatic transfer Image selection and transfer Transfer using SET button Transfer with captions * FTPS supported
EOS Utility:	EOS Utility remote control functions over wireless and wired LAN
WFT Server:	Camera control, Simple control Image viewing and downloading
Linked shooting:	Shooting with up to 10 receiver cameras linked to a sender camera Transmission range: Approx. 100 m / 328 ft. (wireless LAN only)
Wireless time synchronization:	Synchronizing up to 10 receiver cameras to the sender camera time * Synchronize the camera time between the same camera models.

■Power Source

Battery:	Battery Pack LP-E6N (or LP-E6); One battery is used.
Battery check:	Automatic

■ Number of Possible Shots

Number of possible shots during [Automatic transfer]

Approx. number of images

LAN	At Normal Temperature (23°C / 73°F)	At Low Temperature (0°C / 32°F)
Wireless LAN	2400	2300
Wired LAN	2200	2200

- * The figures above are based on a fully-charged Battery Pack LP-E6N, [**Power saving**] enabled, and CIPA (Camera & Imaging Products Association) testing standards.
- * When transferring images consecutively over a wireless LAN, the number of images that can be transferred will decrease.

■ Dimensions and Weight

Dimensions (W x H x D): 134.1 x 31.1 x 62.2 mm / 5.3 x 1.2 x 2.4 in.

Weight: Approx. 165 g / 5.8 oz. (body only)

■ Operating Environment

Temperature: 0°C–40°C / 32°F–104°F

Humidity: 85% or less

- All the data above is based on Canon's testing standards and CIPA (Camera & Imaging Products Association) testing standards and guidelines.
- Transmitter specifications and appearance are subject to change without notice.

Trademarks

- Microsoft and Windows are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
- Macintosh and Mac OS are trademarks of Apple Inc., registered in the U.S. and other countries.
- The Wi-Fi CERTIFIED logo and the Wi-Fi Protected Setup mark are trademarks of the Wi-Fi Alliance.
- WPS used on camera settings screens and in this manual stands for Wi-Fi Protected Setup.
- All other trademarks are the property of their respective owners.
